Lindeburg's Mechanical Engineering Reference Manual has undergone an intensive transformation in this 14th edition to ensure focused study for success on the 2020 NCEES computer-based tests CBT. As of April 2020, exams are offered year-round at approved Pearson VUE testing centers. The only resource examinees can use during the test is the NCEES PE Mechanical Reference Handbook. To succeed on exam day, you need to know how to solve problems using that resource. The Mechanical Engineering Reference Manual 14th Edition makes that connection for you by using only NCEES equations in the review and problem-solving topics covered: Fluids, Thermodynamics, Power Cycles, Heat Transfer, HVAC, Statics, Materials, Machine Design, Dynamics, and Vibrations, Control Systems, Plant Engineering, Economics, Law, and Ethics. Key Features: Improved design to focus study on most important PE exam material; Explanations and demonstration of how to use NCEES handbook equations; NCEES handbook equations are highlighted in blue for quick access; In-chapter callouts map to the specific PE exam to streamline review process; Extensive index contains thousands of entries with multiple entries included for each topic. Binding: Hardcover. Publisher: PPI, A Kaplan Company.

Elementary Structural Analysis and Design of Buildings Dominick Pilla, 2017-09-19. This overview of the analysis and design of buildings runs from basic principles and elementary structural analysis to the selection of structural systems and materials and on to foundations and retaining structures. It presents a variety of approaches and methodologies while featuring realistic design examples. As a comprehensive guide and desk reference for practicing structural and civil engineers and for engineering students, it draws on the author's teaching experience at The City College of New York and his work as a design engineer and architect. It is especially useful for those taking the National Council of Examiners for Engineering and Surveying (SE) exam.

The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21. The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950. The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3. Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components. Because emphasis is placed on the development of an understanding of behaviour, many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices. The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process. *The Behaviour and Design of Steel Structures to EC3* is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries.
