**Signals and Systems** Oktay Alkin,2015 Drawing on the author s 25 years of teaching experience Signals and Systems A MATLAB

Integrated Approach presents a novel and comprehensive approach to understanding signals and systems theory. Many texts use MATLAB as a computational tool but Alkin's text employs MATLAB both computationally and pedagogically to provide interactive visual reinforcement of the fundamentals including the characteristics of signals, operations used on signals, time and frequency domain analyses of systems, continuous time and discrete time signals and systems, and more. In addition to 350 traditional end of chapter problems and 287 solved examples, the book includes hands-on MATLAB modules consisting of 101 solved MATLAB examples working in tandem with the contents of the text itself, 98 MATLAB homework problems coordinated with the 350 traditional end of chapter problems, 93 GUI-based MATLAB demo programs that animate key figures and bring core concepts to life, 23 MATLAB projects more involved than the homework problems used by instructors in building assignments, 11 sections of standalone MATLAB exercises that increase MATLAB proficiency and enforce good coding practices. Each module or application is linked to a specific segment of the text to ensure seamless integration between learning and doing. A solutions manual, all relevant MATLAB code, figures, presentation slides, and other ancillary materials are available on an author-supported website or with qualifying course adoption. By involving students directly in the process of visualization, *Signals and Systems: A MATLAB Integrated Approach* affords a more interactive, thus more effective solution for a one or two semester course on signals and systems at the junior or senior level.

**Signals and Systems with MATLAB** Won Young Yang, 2009-06-18 This book is primarily intended for junior level students who take the courses on signals and systems. It may be useful as a reference text for practicing engineers and scientists who want to acquire some of the concepts required for signal processing. The readers are assumed to know the basics about linear algebra, calculus, complex numbers, differentiation, and integration, differential equations, Laplace transform, and MATLAB. Some knowledge about circuit systems will be helpful. Knowledge in signals and systems is crucial to students majoring in Electrical Engineering. The main objective of this book is to make the readers prepared for studying advanced subjects on signal processing, communication, and control by covering from the basic concepts of signals and systems to manual-like introductions of how to use the MATLAB and Simulink tools for signal analysis and filter design. The features of this book can be summarized as follows:

1. It not only introduces the four Fourier analysis tools: CTFS (continuous time Fourier series), CTFT (continuous time Fourier transform), DFT (discrete time Fourier transform), and DTFS (discrete time Fourier series), but also illuminates the relationship among them so that the readers can realize why only the DFT of the four tools is used for practical spectral analysis and why how it differs from the other ones and further think about how to reduce the difference to get better information about the spectral characteristics of signals from the DFT analysis.
