**Handbook of Modern Sensors** Jacob Fraden, 2015-10-15 This book presents a comprehensive and up to date account of the theory physical principles design and practical implementations of various sensors for scientific industrial and consumer applications This latest edition focuses on the sensing technologies driven by the expanding use of sensors in mobile devices These new miniature sensors will be described with an emphasis on smart sensors which have embedded processing systems The chapter on chemical sensors has also been expanded to present the latest developments Digital systems however complex and intelligent they may be must receive information from the outside world that is generally analog and not electrical Sensors are interface devices between various physical values and the electronic circuits that understand only a language of moving electrical charges In other words sensors are the eyes ears and noses of silicon chips Unlike other books on sensors the Handbook of Modern Sensors is organized according to the measured variables temperature pressure position etc This book is a reference text for students researchers interested in modern instrumentation applied physicists and engineers sensor designers application engineers and technicians whose job it is to understand select and or design sensors for practical systems

**The Read-Out Controller ASIC for the ATLAS Experiment at LHC** Stefan Popa, 2022-12-17 This thesis presents the complete chain from specifications to real life deployment of the Read Out Controller ROC ASIC for the ATLAS Experiment at LHC including the design of the FPGA based setup used for prototype validation and mass testing of the approximately 6000 chips Long lasting experiments like the ATLAS at the LHC undergo regular upgrades to improve their performance over time One of such upgrades of the ATLAS was the replacement of a fraction of muon detectors in the forward rapidities to provide much improved reconstruction precision and discrimination from background protons This new instrumentation New Small Wheel is equipped with custom designed radiation hard on detector electronics with the Read Out Controller chip being a mission critical element The chip acts as a clock and control signals distributor and a concentrator buffer filter and real time processor of detector data packets The described and deployed FPGA based test setup emulates the asynchronous chip context and employs optimizations and automatic clock and data synchronization The chip s tolerance to nuclear radiation was evaluated by recording its operation while controlled ultrafast neutron beams were incident to its silicon die Predictions for the operating environment are made A proposed implementation of an FPGA Integrated Logic Analyzer that mitigates the observed limitations and constraints of the existing ones is included
