Autonomous Vehicles Steven Van Uytsel,Danilo Vasconcellos Vargas,2020-12-21 This edited book aims to address challenges facing the deployment of autonomous vehicles Autonomous vehicles were predicted to hit the road by 2017 Even though a high degree of automation may have been achieved vehicles that can drive autonomously under all circumstances are not yet commercially available and the predictions have been adjusted Now experts even say that we are still decades away from fully autonomous vehicles In this volume the authors form a multidisciplinary team of experts to discuss some of the reasons behind this delay The focus is on three areas business technology and law The authors discuss how the traditional car manufacturers have to devote numerous resources to the development of a new business model in which the sole manufacturing of vehicles may no longer be sufficient In addition the book seeks to introduce how technological challenges are creating a shift toward connected autonomous vehicles Further it provides insight into how regulators are responding to the insufficiently tested technology and how lawyers try to answer the liability question for accidents with these autonomous vehicles
