The PCR Revolution Stephen A. Bustin, 2010 The invention of the polymerase chain reaction PCR won the Nobel Prize in Chemistry in 1994 and remains one of the most important scientific discoveries of the twentieth century More than 50 000 researchers in the United States use PCR replication technology yet there is a significant absence of any recent publications on this subject In this book Dr Stephen A Bustin a world renowned PCR expert examines in detail the latest innovations and the overall impact of PCR on many areas of molecular research The book contains personal reflections opinions and comments by leading authorities on the many applications of the PCR and how this technology has revolutionised their respective areas of interest Bustin explains the ways in which PCR has overcome many obstacles in life science and clinical research and charts the PCR's development from time consuming low throughput non quantitative procedure to today's rapid high throughput quantitative super method

 Suggested Readings     **The Polymerase Chain Reaction** Kary B. Mullis, Francois Ferre, Richard A. Gibbs, 2012-02-02  
 James D Watson When in late March of 1953 Francis Crick and I came to write the first Nature paper describing the double  
 helical structure of the DNA molecule Francis had wanted to include a lengthy discussion of the genetic implications of a  
 molecule whose struc ture we had divined from a minimum of experimental data and on theoretical argu ments based on  
 physical principles But I felt that this might be tempting fate given that we had not yet seen the detailed evidence from King  
 s College Nevertheless we reached a compromise and decided to include a sentence that pointed to the biological  
 significance of the molecule s key feature the complementary pairing of the bases It has not escaped our notice Francis wrote  
 that the specific pairing that we have postulated immediately suggests a possible copying mechanism for the genetic material  
 By May when we were writing the second Nature paper I was more confident that the proposed structure was at the very

least substantially correct so that this second paper contains a discussion of molecular self duplication using templates or molds We pointed out that as a consequence of base pairing a DNA molecule has two chains that are complementary to each other Each chain could then act as a template for the formation on itself of a new companion chain so that eventually we shall have two pairs of chains where we only had one before and moreover      *Diagnosis of Human Viruses by Polymerase Chain Reaction Technology* Yechiel Becker,Gholamreza Darai,2012-12-06 The basis for the effective treatment and cure of a patient is the rapid diagnosis of the disease and its causative agent which is based on the analysis of the clinical symptoms coupled with laboratory tests Although rapid advance ments have been made in the laboratory diagnosis of virus diseases the neces sary isolation of the causative virus from the clinical specimens is a relatively long procedure Viruses which integrate into the cellular DNA such as human immunodeficiency virus HIV 1 or hepatitis B virus are difficult to identify by molecular techniques while viruses which exist in the clinical material in low concentrations are even more formidable to identify Recently the application of the polymerase chain reaction peR technique developed by K D Mullis and detailed in the study by Saiki et al 1985 led to a revolution in virus diagnosis The peR technique was rapidly applied to the diagnosis of viruses in clinical material Volume 1 of *Frontiers of Virology* provides new information on the advan tages of the use of the peR for the diagnosis of many human disease causing viruses as well as on some problems with its use      **Principles and Applications**
