

## **THE PHILOSOPHY OF SUSTAINABLE DESIGN**

### **The Principles of Sustainable Design**

#### **Principle 1**

##### **Respect for the Wisdom of Natural Systems-The Biomimicry Principle**

Respect for the wisdom of natural systems is centered on the idea that we should use nature as a mentor and model for all of our designs. In fact, the source of all of our innovations can be traced back to nature itself. Where technologies have been misapplied, they are usually examples of forgetting the lessons inherent all around us. In order to return to a path of true sustainability our communities and built environment need to emulate natural systems.

#### **Principle 2**

##### **Respect for People-The Human Vitality Principle**

Sustainable design endeavors to create the healthiest, most nourishing places possible for people without diminishing the ability of nature to provide nourishing places for the rest of creation and for our own species in the future. Respect for people reminds us that sustainable design is about creating healthy habitats-for us and the rest of creation.

#### **Principle 3**

##### **Respect for Place-The Ecosystem/Bioregion Principle**

Sustainable design is built on the idea of regionalism. It honors the differences that exist between places, both on the macro level, with climate regions, and on the micro level, with topographical and biological differences.

The philosophy of sustainable design rejects the notion that our buildings should look the same and be built the same in any region regardless of whether we have the technological know-how and resources to do so. Indeed, it demands that our buildings respond to place in fundamental ways-from the level of the site to that of climate and bioregion.

#### **Principle 4**

##### **Respect for the Cycle of Life-The "Seven Generations" Principle**

In nature, all waste products are useful to other organisms as food. Respecting the Cycle of Life involves eliminating things wherever possible that are toxic to people and the environment so that the environment is safe "to all people, for all time" 1 Following this principle also means that there should be an appropriate fit between the life expectancy of an object and its use, be it an appliance or a whole building.
