

# Fundamentals of statistics

## 8.1 Descriptive & inferential statistics

We need these because quantitative research is designed to generate numbers.

1. **Descriptive statistics** are the 1<sup>st</sup> stage in any quantitative analysis & concern the range of techniques that enable us to summarise our data (can be called summary statistics).

The most fundamental, important descriptive statistics are those concerned with identifying the central tendency (typical value like the average) of a set of numbers & how the remaining numbers are distributed (how much they vary) around this central/typical value.

2. **Inferential statistics** allows us to explore data so we can move beyond a simple description of individual variables by making inferences about the likelihood of our findings occurring.

We are concerned with identifying whether our findings (relationships/differences between one or more variables) are more likely to have occurred than by chance alone. What are the probabilities (likelihood) that the relationships/differences occurring between variables within our data set are significant & not the result of meaningless chance relationships that occur with all variables?

## 8.2 Measures of central tendency & dispersion

**The arithmetic mean:**

The most important measure of central tendency & the most familiar – shortened to the mean. It is the result of adding up all the numbers in a set & dividing by the total number of values.

$$\frac{(6 + 8 + 10 + 15 + 20 + 7)}{6} = \frac{66}{6} = 11 \text{ seconds}$$

The mathematical symbol used to represent the mean is  $\bar{X}$  called the X bar. The formula for calculating the mean is as follows:

$$\bar{X} = \frac{\sum X}{N}$$

It simply says:

1. Add up all the values
2. Divide by the total number of values in the set of numbers (N means the total number of values & the  $\sum$  means add up all the values, the  $\sum x$  means add up the numbers in our set of numbers).

**The Book of Answers** Tanya Stivers, 2022 Imagine for a moment the only way to confirm a yes no question was by saying Yeah How different would this make our communication Relying on a large corpus of naturally occurring recordings of spontaneous social interaction this book explores all of the ways that we confirm questions in our everyday social lives Tanya Stivers analyzes what these different ways of responding allow us to do that is unique to each answer type When do we answer with Yeah rather than He is for instance or when do we use more complicated forms of confirming This information provides us with the basic response possibility space From that point we can examine what the range of responses in particular answers tells us about what is important to us in managing social relationships through social interaction The book explains that we can conceptualize the response possibility space as having three dimensions alignment autonomy and affiliation Speakers rely on the details of their response to position themselves at a particular point in that three dimensional space sometimes accepting trade offs among the dimensions to achieve a stance that is higher in alignment and autonomy and lower in affiliation or higher in affiliation and autonomy but lower in alignment The Book of Answers uses real life conversations to find hidden patterns in how we do things together such as reach decisions tell stories or arrive at agreement or disagreement Delving into the science of how we talk this book investigates what those patterns tell us about human communication and our social lives

Alerts readers to the problems inherent in statistical practice, illustrating the types of misused statistics with well-documented real-world examples, nearly half new to this edition, drawn from a wide range of areas including the media, public policy, polls and surveys, political elections and debates, advertising, science and health care, and business and economics.

**Answering Questions With Statistics** Robert Szafran, 2011-10-20. The book is divided into three Parts. Part One has chapters that introduce data analysis and SPSS. Part Two contains eight chapters on descriptive statistics that begin with frequency tables and go through multiple regression. Part Three includes six chapters on inferential statistics. Part One: Getting Started begins by answering some questions most students have right at the start: questions like why study data analysis and how much math and computer knowledge is required. Essential concepts from research methods relevant for data analysis are also explained. Part Two: Descriptive Statistics: Answering Questions about Your Data demonstrates procedures to use when the analyst is only concerned with describing the cases for which he or she actually has data. Statistics summarizing single variables (univariate statistics) are presented first, and then statistics summarizing relationships between variables (multivariate statistics). Frequency tables, measures of central tendency, measures of dispersion, crosstabs, measures of association, subgroup means, and regression are all covered, as are bar charts, pie charts, histograms, and clustered bar charts. Part Three: Inferential Statistics: Answering Questions about Populations explains procedures which allow the analyst to draw conclusions about the population from which his or her sample of cases was randomly selected. It begins with a simple chapter on the statistical theory behind inferential statistics. A four-step approach to hypothesis testing is introduced in the next chapter and demonstrated with one-sample t-test hypotheses. The remaining chapters present different types of hypothesis tests, including paired samples, independent samples, one- and two-way ANOVA, and chi-square.

Understanding Statistics in the Behavioral Sciences is designed to help readers understand research reports analyze data and familiarize themselves with the conceptual underpinnings of statistical analyses used in behavioral science literature The authors review statistics in a way that is intended to reduce anxiety for students who feel intimidated by statistics Conceptual underpinnings and practical applications are stressed whereas algebraic derivations and complex formulas are reduced New ideas are presented in the context of a few recurring examples which allows readers to focus more on the new statistical concepts than on the details of different studies The authors selection and organization of topics is slightly different from the ordinary introductory textbook It is motivated by the needs of a behavioral science student or someone in clinical practice rather than by formal mathematical properties The book begins with hypothesis testing and then considers how hypothesis testing is used in conjunction with statistical designs and tests to answer research questions In addition this book treats analysis of variance as another application of multiple regression With this integrated unified approach students simultaneously learn about multiple regression and how to analyze data associated with basic analysis of variance and covariance designs Students confront fewer topics but those they do encounter possess considerable more power generality and practical importance This integrated approach helps to simplify topics that often cause confusion Understanding Statistics in the Behavioral Sciences features Computer based exercises many of which rely on spreadsheets help the reader perform statistical analyses and compare and verify the results using either SPSS or SAS These exercises also provide an opportunity to explore definitional formulas by altering raw data or terms within a formula and immediately see the consequences thus providing a deeper understanding of the basic concepts Key terms and symbols are boxed when first introduced and repeated in a glossary to make them easier to find at review time Numerous tables and graphs including spreadsheet printouts and figures help students visualize the most critical concepts This book is intended as a text for introductory behavioral science statistics It will appeal to instructors who want a relatively brief text The book s active approach to learning works well both in the classroom and for individual self study **Lewis's Child and Adolescent**
