The Pythagorean Golden Verses Johan C. Thom, 2015-08-27 This book is a commentary on the Pythagorean Golden Verses a neglected but once very popular poem of the Hellenistic period The goal of the poem is to introduce its readers to the basic moral religious and philosophical doctrines of the Pythagorean sect and to guide them to spiritual maturity The first part of the book treats still unresolved introductory matters such as the date authorship genre composition and the historical locus of the poem This is followed by a text with translation on facing pages and a detailed commentary containing a wealth of comparative material from the Greco Roman period including early Christianity and Judaism Particularly valuable are the extensive discussions of the moral topoi and religious themes encountered in the poem [The Fifth Postulate](#) Jason Socrates Bardi, 2008-12-01 The great discovery that no one wanted to make It s the dawn of the Industrial Revolution and Euclidean geometry has been profoundly influential for centuries One mystery remains however Euclid s fifth postulate has eluded for two thousand years all attempts to prove it What happens when three nineteenth century mathematicians realize that there is no way to prove the fifth postulate and that it ought to be discarded along with everything they d come to know about geometry Jason Socrates Bardi shares the dramatic story of the moment when the tangible and easily understood world we live in gave way to the strange mind blowing world of relativity curved space time and more Jason Socrates Bardi tells the story of the discovery of non Euclidian geometry one of the greatest intellectual advances of all time with tremendous clarity and verve I loved this book John Horgan author *The End of Science and Rational Mysticism* An accessible and engrossing blend of micro biography history and mathematics woven together to reveal a blockbuster discovery David Wolman author of *Righting the Mother Tongue and A Left Hand Turn around the World* **The Pythagorean Theorem Eight Classic Proofs** Dr. Sid Kolpas, 2018-09-01 The Pythagorean Theorem is one of the most important ideas in all of mathematics In this book students study history and geometry as they explore eight elegant proofs of the theorem from across the centuries Included are interesting facts about the theorem a brief biography of Pythagoras and a list of concepts needed to understand the proofs Learn how Leonardo Da Vinci President James A Garfield Pythagoras the Chinese Bhaskara and others proved this famous theorem about the right triangle This would be a useful book for any student taking Geometry or anyone interested in Mathematics History NOW WITH A LINK TO POWERPOINT SLIDES YOU CAN DOWNLOAD WITH ANIMATIONS VIDEOS

PICTURES AND HYPERLINKS TO SUPPLEMENT THE BOOK Each proof is displayed in color with an explanation of the steps taken in its geometric presentation Blackline masters for the proofs and for manipulatives that offer students hands on understanding are included The book is in PDF format **Global Brain** Howard Bloom,2008-04-21 As someone who has spent forty years in psychology with a long standing interest in evolution I ll just assimilate Howard Bloom s accomplishment and my amazement DAVID SMILLIE Visiting Professor of Zoology Duke University In this extraordinary follow up to the critically acclaimed The Lucifer Principle Howard Bloom one of today s preeminent thinkers offers us a bold rewrite of the evolutionary saga He shows how plants and animals including humans have evolved together as components of a worldwide learning machine He describes the network of life on Earth as one that is in fact a complex adaptive system a global brain in which each of us plays a sometimes conscious sometimes unknowing role and he reveals that the World Wide Web is just the latest step in the development of this brain These are theories as important as they are radical Informed by twenty years of interdisciplinary research Bloom takes us on a spellbinding journey back to the big bang to let us see how its fires forged primordial sociality As he brings us back via surprising routes we see how our earliest bacterial ancestors built multitrillion member research and development teams a full 3 5 billion years ago We watch him unravel the previously unrecognized strands of interconnectedness woven by crowds of trilobites hunting packs of dinosaurs feathered flying lizards gathered in flocks troops of baboons making communal decisions and adventurous tribes of protohumans spreading across continents but still linked by primitive forms of information networking We soon find ourselves reconsidering our place in the world Along the way Bloom offers us exhilarating insights into the strange tricks of body and mind that have organized a variety of life forms spiny lobsters which during the Paleozoic age participated in communal marching rituals and bees which during the age of dinosaurs conducted collective brainwork This fascinating tour continues on to the sometimes brutal subculture wars that have spurred the growth of human civilization since the Stone Age Bloom shows us how culture shapes our infant brains immersing us in a matrix of truth and mass delusion that we think of as reality Global Brain is more than just a brilliantly original contribution to the ongoing debate on the inner workings of evolution It is a grand vision says the eminent evolutionary biologist David Sloan Wilson a work that transforms our very view of who we are and why **Healing Songs** Ted Gioia,2006-04-13 The use of music in healing from prehistoric times to the present **Ontology of Sex** Carrie Hull,2006-01-16 Poststructuralism particularly through the writings of Michel Foucault and Judith Butler has achieved remarkable success in challenging our belief in natural sex categories and instincts Here Carrie Hull endorses the progressive ideals of poststructuralism while demonstrating the superiority of a realist account of sex and sexuality Embracing biological and cultural variability Hull nonetheless shows that the sexed body is naturally structured and deeply meaningful Poststructuralist philosophers have argued that biological sex is a continuum rather than a binary and that sex identity and drive are entirely performances of cultural norms rather than expressions of innate qualities Hull draws parallels

with Nelson Goodman W V O Quine and B F Skinner to show that these poststructuralist theories are rooted in a nominalist relativist and behaviourist philosophy and develops an alternative framework using arguments from contemporary and critical realism Employing colourful illustrations from biology anthropology and psychology Hull demonstrates the rich potential of realist philosophy and concludes that it is philosophically and scientifically correct on one hand and politically advisable on the other to maintain a distinction albeit attenuated between sex and gender and sexuality and behaviour

Animal Minds and Human Morals Richard Sorabji, 2018-05-31 They don't have syntax so we can eat them According to Richard Sorabji this conclusion attributed to the Stoic philosophers was based on Aristotle's argument that animals lack reason In his fascinating deeply learned book Sorabji traces the roots of our thinking about animals back to Aristotelian and Stoic beliefs Charting a recurrent theme in ancient philosophy of mind he shows that today's controversies about animal rights represent only the most recent chapter in millennia old debates Sorabji surveys a vast range of Greek philosophical texts and considers how classical discussions of animals capacities intersect with central questions not only in ethics but in the definition of human rationality as well the nature of concepts how perceptions differ from beliefs how memory intention and emotion relate to reason and to what extent speech skills and inference can serve as proofs of reason Focusing on the significance of ritual sacrifice and the eating of meat he explores religious contexts of the treatment of animals in ancient Greece and in medieval Western Christendom He also looks closely at the contemporary defenses of animal rights offered by Peter Singer Tom Regan and Mary Midgley **Animal Minds and Human Morals** sheds new light on traditional arguments surrounding the status of animals while pointing beyond them to current moral dilemmas It will be crucial reading for scholars and students in the fields of ancient philosophy ethics history of philosophy classics and medieval studies and for everyone seriously concerned about our relationship with other species A Townsend Lecture Book [Finding the Monk Within](#) Edward C. Sellner, 2008 [Finding the Monk Within](#) is written with the conviction that lying deep within every person and underlying much of contemporary western and eastern cultures is an ancient memory a vital archetypal energy related to monasticism and its spirituality This book recovers that monastic memory the living presence of the past for those who desire to name and incorporate monastic values values of solitude and silence faith and compassion friendship and mentoring contemplation and leadership itself The author examines the social and religious dimensions in the fourth century that gave rise to monasticism then looks at Christian leaders from late antiquity to the medieval period associated with monasticism in both East and West who have much to teach about monastic values and their relevance for today among them Antony the first monk Augustine and Jerome John Cassian Brigit of Kildare and early Celtic monasticism Gregory the Great Benedict and Scholastica and finally Bernard of Clairvaux By studying the history of monasticism and its great heroes we come to realize that for the Christian much of what we call monastic is purely and simply what being a follower of Christ is all about and that being a monk whether inside monastic enclosures or outside in the world is simply becoming the sort of person everyone

ought to be a person who unites action and contemplation in the care of souls writes the author By becoming familiar with the stories and thought of these inspirational figures readers will be inspired to incorporate monastic perspectives and values into their own lives

A Predictive Theory of Mental Evolution and Its Consequences David A. Steinberg, 2021-02-24 The premise of this book is that the external world can be known only as an internally constructed model Therefore a careful analysis of how internal correlates are created can unify and explain disparate and fundamental scientific concerns Among these are the nature of mathematics the origin of time and a predictive theory of mental evolution whose stages culminate in an unambiguous and rigorous definition of consciousness Validation of this theory's predictions explains the sequence and meaning of Paleolithic Age artifacts and identifies a temporal origin of language Additional consequences of the theory identify strict limits of scientific knowledge and an essential commonality of mathematical logic shared by all sentient species The book will appeal to anyone interested in the origin of the human mind and a rigorous scientific explanation of the emergence of consciousness

The Islamic Design Module in Latin America John F. Moffitt, 2004-07-15 This study analyzes the distinctive look of Hispanic architecture Its triangulate format originated in Islamic Spain was based on workshop techniques once used by journeyman designers and simple artisans Spain was the only European transatlantic colonial power to have once been occupied by Islamic overlords Spain's conquistadors took their traditional building methods to Latin America Formal analyses of the facades of various Latin American churches reveal them to reiterate procedures worked out in Andalusia by Islamic builders in the ninth and tenth centuries Though widely separated by time and place both share a proportionate system determining abstract ratios in both cases this regulating format was derived from manipulations of the Pythagorean triangles This trazado regulador is only expressed in ratios with no numbers and is illustrated here with 85 visual examples including measured drawings of Egyptian Greek Roman and medieval European prototypes Grounded in historical and physical data the research is partially drawn from four practical builders manuals two seventeenth century Spanish ones and two Mexican ones from ca 1640 and 1800 In an appendix Viollet le Duc a major nineteenth century architect explains architectural proportionality and the design function of the Pythagorean Triangle

The Ashtray Errol Morris, 2023-02-17 In 1972 philosopher of science Thomas Kuhn threw an ashtray at Errol Morris This book is the result At the time Morris was a graduate student Now we know him as one of the most celebrated and restlessly probing filmmakers of our time the creator of such classics of documentary investigation as *The Thin Blue Line* and *The Fog of War* Kuhn meanwhile was and posthumously remains a star in his field the author of *The Structure of Scientific Revolutions* a landmark book that has sold well over a million copies and introduced the concept of paradigm shifts to the larger culture And Morris thought the idea was bunk *The Ashtray* tells why and in doing so it makes a powerful case for Morris's way of viewing the world and the centrality to that view of a fundamental conception of the necessity of truth For me Morris writes truth is about the relationship between language and the world a correspondence idea of truth He has no patience for philosophical systems that aim for internal coherence and disdain the world itself Morris is after bigger game he wants to establish as clearly as possible what we know and can say about the world reality history our actions and interactions It's the fundamental desire that animates his filmmaking whether he's probing Robert McNamara about Vietnam or the oddball owner of a pet cemetery Truth may be slippery but that doesn't mean we have to grease its path of escape through philosophical evasions Rather Morris argues powerfully it is our duty to
