ditional danger potential This also signified the end of an era when safety technology could be practiced chiefly on the basis of accident statistics For ethical reasons it became necessary that a credible prognosis as to the type and effect of accidents took the place or at least supplemented the hitherto practiced purely reactive methods The realization that the available means of safety technology were no longer sufficient in a highly technologized environment spurred the demand for entirely new concepts which would eventually lead to a higher degree of safety A decisive step had to be taken away from a purely technical approach and towards an all encompassing look at accident systems because man had become aware of the fact that accidents will always be a part of the interaction between man technology and environment *Popular Science*, 1971-09 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better *Popular Science*, 1987-02 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **Popular Science**, 1960-09 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better
