

MCC9-12.S.ID.5 Summarize categorical data for two categories in **two-way frequency** tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies).

Bivariate data consists of pairs of linked numerical (quantitate) observations, or frequencies of things in categories.

- Numerical (quantitate) bivariate data can be presented as ordered pairs and in any way that ordered pairs can be presented: as a set of ordered pairs, as a table of values, or as a graph on the coordinate plane.
- **Categorical** example: frequencies of gender and club memberships for 9th graders.

Bivariate or *two-way frequency chart*

- Each category is considered a variable; the categories serve as labels in the chart.
- Two-way frequency charts are made of cells; number in each cell is the frequency of things

African health research: ELSI challenges and solutions Donrich Thaldar, Simisola Oluwatoyin Akintola, Bonginkosi Shoji, 2025-04-02 Data protection legislation is increasingly being enacted in African countries. Additionally, the African Union recently adopted the AU Data Protection Framework. How are these legal and policy developments influencing established ethics notions about data governance in health research? For example, is broad or tiered consent to research participation sufficient, or does new legislation require specific consent? How do individual rights in data interact with communitarian values? Should health research receive special treatment from a data protection regulatory perspective? How should African countries approach AI in healthcare? This research topic aims to identify and analyse ELSI challenges in contemporary data governance in African health research and to develop possible solutions for such challenges. Articles in this research topic will aim to assist policy makers, health researchers, and ELSI practitioners in Africa to better navigate and, where relevant, improve data governance in African health research. Perspective style articles as well as more in-depth research articles are welcome. While articles can analyse fundamental theoretical issues, application-oriented articles and articles that explore lessons learnt in practice are especially encouraged. Authors should address one or more of the following inter-related themes within the research topic of data governance in African health research:

1. Conflicts between new legal and policy developments and established ethics notions
2. Africanisation, decolonisation, and intra-African rule harmonisation
3. The evolution of informed consent and the role of trust
4. The various legal, ethical, and social dimensions or meanings of data and how these dimensions interact
5. Power and control. This includes individual, institutional, ethnic, community, and national claims to data. It also includes existing and proposed structures of control of data, such as data trusts and data transfer agreements (DTAs).
6. Engagement with data protection regulatory authorities
7. Artificial intelligence and Big Data
