

## 2.1 Notes: Change in Arithmetic and Geometric Sequences

A Sequence is a function from the whole numbers to the real numbers.

This means that we are only able to "plug" in whole numbers  $\{0, 1, 2, 3, \dots\}$  into a sequence but we can get any real number as the output.

As a result, when we graph a sequence, we will have points but we cannot "connect" them together to form a line or curve.

**Example 1:** Consider the sequence defined by  $a_n = 4n - 3$ . Find  $a_1$  and  $a_7$ .

$$a_1 = 4(1) - 3 = 1$$

$$a_7 = 4(7) - 3 = 25$$

In this course, we will study two important types of sequences: arithmetic sequences and geometric sequences.

| Arithmetic Sequences                                                         |                                                                                                                                         |                                                                                                                                                                                                            |   |                |   |   |   |   |   |   |   |    |   |   |
