

What does gene linkage look like?

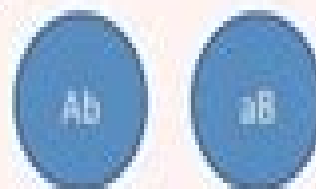

Notice that genes 'A' and 'B' are on the same chromosome

No matter how they line up on the equator during Metaphase I, the only possible gametes are those that resemble the parental types:

The gametes 'Ab' and 'aB' (called recombinants) will not show up unless crossing-over occurs. Still we won't expect them to be as common as the parental gametes.

gene linkage – when two or more genes are located on the same chromosome (simple!)
