Nintendo Wii Tennis Instructions:

Computer Games and Instruction J. D. Fletcher, Sigmund Tobias, 2011-05-01 There is intense interest in computer games. A total of 65 percent of all American households play computer games and sales of such games increased 22.9 percent last year. The average amount of game playing time was found to be 13.2 hours per week. The popularity and market success of games is evident from both the increased earnings from games over 7 Billion in 2005 and from the fact that over 200 academic institutions worldwide now offer game related programs of study. In view of the intense interest in computer games, educators and trainers in business industry, the government and the military would like to use computer games to improve the delivery of instruction. *Computer Games and Instruction* is intended for these educators and trainers. It reviews the research evidence supporting use of computer games for instruction and also reviews the history of games in general in education and by the military. In addition, chapters examine gender differences in game use and the implications of games for use by lower socio-economic students, for students reading and for contemporary theories of instruction. Finally, well known scholars of games will respond to the evidence reviewed.

A Casual Revolution Jesper Juul, 2012-02-10 How casual games like *Guitar Hero*, *Bejeweled* and those for Nintendo Wii are expanding the audience for video games. We used to think that video games were mostly for young men, but with the success of the Nintendo Wii and the proliferation of games in browsers, cell phone games and social games, video games changed fundamentally in the years from 2000 to 2010. These new casual games are now played by men and women, young and old. Players need not possess an intimate knowledge of video game history or devote weeks or months to play. At the same time, many players of casual games show a dedication and skill that is anything but casual. In *A Casual Revolution*, Jesper Juul describes this as a reinvention of video games and of our image of video game players and explores what this tells us about the players, the games and their interaction. With this reinvention of video games, the game industry reconnects with a general audience. Many of today's casual game players once enjoyed *Pac Man*, *Tetris* and other early games only to drop out when video games became more time consuming and complex. Juul shows that it is only by understanding what a game requires of players, what players bring to a game, how the game industry works and how video games have developed historically that we can understand what makes video games fun and why we choose to play or not to play them.
