McCallum,Eric Connally,Deborah Hughes-Hallett,2014-11-25 Algebra Form and Function was designed based on the fundamental goal for a student to foster understanding of algebraic structure that is an understanding of how the arrangements of symbols allows us to predict for example the behavior of a function or the number of solutions to an equation Mastering algebraic structure enables students to read algebraic expressions and equations in real life contexts not just manipulate them and to choose which form or which operation will best suit the context It facilitates being able to translate back and forth between symbolic graphical numerical and verbal representations By balancing practice in manipulation and opportunities to see the big picture Algebra Form and Function offers a way for teachers to help students achieve real mastery of algebra   <u>A Primer on Spectral Theory</u> Bernard Aupetit,2012-12-06 This textbook provides an introduction to the new techniques of subharmonic functions and analytic multifunctions in spectral theory Topics include the basic results of functional analysis bounded operations on Banach and Hilbert spaces Banach algebras and applications of spectral subharmonicity Each chapter is followed by exercises of varying difficulty Much of the subject matter particularly in spectral theory operator theory and Banach algebras contains new results   *Intermediate Algebra with Early Functions* J. W.     Differential Equations with Linear Algebra Matthew R. Boelkins,Jack L. Goldberg,Merle C. Potter,2009-11-05 Linearity plays a critical role in the study of elementary differential equations linear differential equations especially systems thereof demonstrate a fundamental application of linear algebra In Differential Equations with Linear Algebra we explore this

interplay between linear algebra and differential equations and examine introductory and important ideas in each usually through the lens of important problems that involve differential equations Written at a sophomore level the text is accessible to students who have completed multivariable calculus With a systems first approach the book is appropriate for courses for majors in mathematics science and engineering that study systems of differential equations Because of its emphasis on linearity the text opens with a full chapter devoted to essential ideas in linear algebra Motivated by future problems in systems of differential equations the chapter on linear algebra introduces such key ideas as systems of algebraic equations linear combinations the eigenvalue problem and bases and dimension of vector spaces This chapter enables students to quickly learn enough linear algebra to appreciate the structure of solutions to linear differential equations and systems thereof in subsequent study and to apply these ideas regularly The book offers an example driven approach beginning each chapter with one or two motivating problems that are applied in nature The following chapter develops the mathematics necessary to solve these problems and explores related topics further Even in more theoretical developments we use an example first style to build intuition and understanding before stating or proving general results Over 100 figures provide visual demonstration of key ideas the use of the computer algebra system Maple and Microsoft Excel are presented in detail throughout to provide further perspective and support students use of technology in solving problems Each chapter closes with several substantial projects for further study many of which are based in applications Errata sheet available at www oup com us companion websites 9780195385861 pdf errata pdf   **Step-by-step Maths** Vivienne Petris Joannou,2006
