Wind-tunnel Test of an Articulated Helicopter Rotor Model with Several Tip Shapes John D. Berry, 1980 A wind tunnel investigation has been conducted using an articulated helicopter model rotor system to determine the effects of several blade tip designs on both the performance and acoustic characteristics of the rotor Only the performance characteristics are presented in this paper Six tip shapes were tested a square baseline tip an ogee tip a subwing tip a swept tip a winglet tip and a short ogee tip Tests were conducted at two rotor rotational speeds and five advance ratios including hover In hover at the lower rotational speed and a given lift coefficient the swept ogee and short ogee tips had about the same torque coefficient and the subwing and winglet tips had a larger torque coefficient than the baseline square tip blades In simulated forward flight the ogee tip had values of torque coefficient very close to or less than the baseline square tip blades In simulated forward flight at 1200 rpm the ogee tips showed a decrease in torque coefficient relative to the baseline

blades as drag coefficient decreased The swept tip blades required less torque coefficient at lower rotational speeds than the baseline square tip blades and roughly equivalent torque coefficient at higher rotational speeds in forward flight The short ogee tip was tested in limited forward flight conditions and it required higher torque coefficient at higher lift coefficient than the baseline square tip blade Author [CSIR NET Life Science Exam 2024 \(English Edition\) - 17 Solved Practice Tests \(8](#)

Electrical Measuring Instruments and Measurements S.C. Bhargava, 2012-12-27 This book written for the benefit of engineering students and practicing

engineers alike is the culmination of the author's four decades of experience related to the subject of electrical measurements comprising nearly 30 years of experimental research and more than 15 years of teaching at several engineering institutions. The unique feature of this book apart from covering the syllabi of various universities is the style of presentation of all important aspects and features of electrical measurements with neatly and clearly drawn figures, diagrams and colour and b/w photos that illustrate details of instruments among other things making the text easy to follow and comprehend. Enhancing the chapters are interspersed explanatory comments and where necessary footnotes to help better understanding of the chapter contents. Also each chapter begins with a recall to link the subject matter with the related science or phenomenon and fundamental background. The first few chapters of the book comprise Units, Dimensions and Standards, Electricity, Magnetism and Electromagnetism and Network Analysis. These topics form the basics of electrical measurements and provide a better understanding of the main topics discussed in later chapters. The last two chapters represent valuable assets of the book and relate to a Magnetic Measurements describing many unique features not easily available elsewhere, a good study of which is essential for the design and development of most electric equipment from motors to transformers and alternators and b Measurement of Non electrical Quantities dealing extensively with the measuring techniques of a number of variables that constitute an important requirement of engineering measurement practices. The book is supplemented by ten appendices covering various aspects dealing with the art and science of electrical measurement and of relevance to some of the topics in main chapters. Other useful features of the book include an elaborate chapter by chapter list of symbols, worked examples, exercises and quiz questions at the end of each chapter and extensive authors and subject index. This book will be of interest to all students taking courses in electrical measurements as a part of a B Tech in electrical engineering. Professionals in the field of electrical engineering will also find the book of use.
