

The Circulatory System

How are materials moved by the circulatory system?

Why?

The circulatory system delivers nutrients and oxygen to every part of an organism's body and also removes carbon dioxide and other wastes at the same time. In humans the circulatory system consists of a liquid tissue, blood, which moves through a system of arteries, veins, and capillaries. The most important part of the human circulatory system is the pump—your heart. This specialized muscle keeps the blood moving day and night, which keeps all other body systems running smoothly.

Model 1 – Oxygen Content in Blood During Circulation

**Percentages are used for comparative purposes only.*

1. Model 1 illustrates the path of blood through the human circulatory system.
 - a. What structure does the large rectangle represent?
 - b. What do the arrows in the model represent?
 - c. Does the percent of oxygen stay constant throughout the circulation of the blood?

The Research Probe TRP is a proceedings publication of institutional conferences and research competitions. It focuses on four broad themes: education and development studies, humanities and social sciences, science technology engineering and mathematics, and business management and accounting. This publication provides a platform for experts and practitioners from various fields in the dissemination of their research works that address industry trends and needs, scientific findings, and international concerns. Both the institutional conferences and proceedings publication promote a wider horizon for researchers through open access paradigm. TRP publishes articles employing any of the various research methods and strategies. It accepts any specific topic within these broad subjects. It also encourages interdisciplinary articles that broadly discuss key topics relevant to the core scope of the journal.
