

POGIL: Protein Synthesis

The Central Dogma of Biology

Use the diagrams and text provided to answer the following questions.

Module 1: Pre-thinking questions

1. DNA provides the instructions for building which type of biological molecule?

Proteins

2. Where is DNA located in a eukaryotic cell? Where is it located in a prokaryotic cell?

The nucleus, in the cytoplasm

3. Which cellular structures are the "machines" that build proteins? Where are they located?

tRNA, the ribosomes and cytoplasm

4. If DNA can't leave the nucleus, how do you think the DNA instructions get to the ribosomes in the cytoplasm?

Transcription to RNA and RNA brings it in the cytoplasm.

Module 2: The flow of information in EUKARYOTIC cells

Figure 1: This figure shows the flow of information from DNA to a molecule called RNA (in the nucleus) and then to the creation of proteins (in the cytoplasm). We now know that RNA, which is similar but not identical to DNA, moves from the nucleus to the cytoplasm. RNA is a nucleic acid polymer composed of nucleotides like DNA. However, RNA has the sugar ribose and the nitrogen base uracil, instead of DNA's deoxyribose and thymine. Also RNA is a much smaller molecule than DNA.

5. Fill in the blank: DNA → RNA → Protein

6. List at least 3 differences between DNA and RNA.

1-DNA = double strand
RNA = single strand

2-DNA = thymine
RNA = uracil

3-DNA = Deoxyribose
RNA = ribose

Figure 2: This figure shows the flow of genetic information in a little more detail. Examine this figure carefully, paying attention to the different labels.

7. What is the name of the process that uses DNA as a template to make mRNA? ("hint" it starts with a T)

transcription

8. Look at how the DNA and RNA complement each other. Which DNA base does the U in RNA pair with? How is this different from the base-pairing rules for DNA?

U pairs with A, in DNA T pairs with A

9. What is the name of the process that uses mRNA to make a protein? ("hint" it also starts with a T)

Bermek, 2012-12-06 This volume contains the papers presented at the international symposium on Molecular Mechanisms in Protein Synthesis held on September 26 27 1983 at the Beyaz Ko k in Emirgan Bosphorus Istanbul The symposium aimed to create a medium for information exchange and discussions regarding the current developments in the area of protein syn thesis To ensure an informal yet scientifically stimulating and productive atmosphere providing opportunity for relaxed and speculative discussions the number of presentations was limited to twenty and that of attendants to about sixty The emphasis in the symposium was laid on structure function relations in the prokaryotic protein synthesizing systems and on the control mechanisms of eukaryotic protein synthesis in particular during chain initia tion Other issues like evolutionary aspects of protein synthesis translational components genes and proofreading were covered as well The manuscripts represent the extended accounts of the oral presenta tions and it has been aimed with the concluding remarks at the end of the volume to give a summarizing view of the presentations and the discussions *Protein Synthesis* Robin Martin, 1998-08-04 The synthesis of proteins from 20 or so constituent amino acids according to a strictly defined code with an accuracy of better than 1 in 10 000 at most loca tions is arguably the most complex task performed by cells Protein Synthesis collects together methods and protocols covering a range of different approaches towards understanding how the cellular machinery

accomplishes this task and how these functions might be harnessed by the biotechnology industry to generate novel and useful proteins. The era in which the components of the translational machinery were being catalogued is over. This volume gathers together protocols that focus on preserving and describing the dynamic function as closely as possible. The need to understand exactly how ribosomes are positioned on messages or where tRNA molecules, translation factors or control proteins are bound has been appreciated by many of the authors. Several chapters that explore the fidelity and processivity of translation reflect this belief. Moreover, the fundamental importance of rRNA at the heart of the ribosome is a strong theme in a number of the protocols. These articles include in vitro and in vivo systems from bacterial, fungal, plant and animal systems. Overall, Protein Synthesis might be characterized by the novelty of the approaches employed to illuminate the inner workings of the protein synthetic machinery as well as by the inventiveness of the attempts to harness these reactions for biotechnological applications.

Protein Synthesis Abraham K. Abraham, Thor S. Eikhom, Ian F. Pryme, 2012-12-06. During the past decade we have witnessed several major discoveries in the area of protein synthesis and post translational modification of protein molecules. In this volume many of the latest research developments in these fields are reported by the distinguished international group of scientists who presented their state of the art results at the 13th Linderström-Lang Conference held at Gøteborg, Norway, June 14-18, 1983. We feel that the presentation here of so wide a variety of articles on both the molecular and the cellular aspects of protein synthesis will be of considerable value to many scientists working in the area who were unable to attend as well as to many who are active in related areas. In addition to the research papers, the contents of the six scientific sessions held during the conference have been summarized by the respective session chairmen. These individual summaries provide insightful syntheses of all the recent progress in each field, identify which current problems remain of special interest and suggest what the future may hold in the several areas of protein synthesis research covered. Though this volume obviously cannot provide a complete survey of all important ongoing research on the molecular and cellular biology of translational and post translational events, we are confident that it will facilitate a much better understanding of many important contemporary problems in research on protein synthesis including cell differentiation, translational accuracy, protein modification, intracellular transport and membrane turnover.

Cell-free Protein Synthesis Alexander S. Spirin, James R. Swartz, 2007-12-03. With its detailed description of membrane protein expression, high throughput and genomic scale expression studies both on the analytical and the preparative scale, this book covers the latest advances in the field. The step by step protocols and practical examples given for each method constitute practical advice for beginners and experts alike.

Mechanisms of Protein Synthesis Engin Bermeke, 1985. This volume contains the papers presented at the international symposium on Molecular Mechanisms in Protein Synthesis held on September 26-27, 1983 at the Beyaz Kök in Emirgan, Bosphorus, Istanbul. The symposium aimed to create a medium for information exchange and discussions regarding the current developments in the area of protein synthesis. To ensure an informal yet scientifically

stimulating and productive atmosphere providing opportunity for relaxed and speculative discussions the number of presentations was limited to twenty and that of attendants to about sixty The emphasis in the symposium was laid on structure function relations in the prokaryotic protein synthesizing systems and on the control mechanisms of eukaryotic protein synthesis in particular during chain initiation Other issues like evolutionary aspects of protein synthesis translational components genes and proofreading were covered as well The manuscripts represent the extended accounts of the oral presentations and it has been aimed with the concluding remarks at the end of the volume to give a summarizing view of the presentations and the discussions
