Rehabilitation and Enhancement Longbin Zhang, Ruoli Wang, Yingbai Hu, Mingming Zhang, Wei Tech Ang, Elena Marie Gutierrez-Farewik, 2025-04-08 In the dynamic landscape of human movement science the convergence of cutting edge

technology with the intricacies of human physiology has ushered in a new era of transformative possibilities This captivating research theme encompassing the realms of neurorehabilitation assistive robotics human machine interaction and balance control offers the exciting prospect of reshaping the boundaries of movement recovery Translational research serves as the crucial conduit between scientific breakthroughs and tangible implementation ensuring that the cutting edge technologies birthed within laboratories seamlessly transition into real world clinical applications Neurorehabilitation delves into neuroplasticity unraveling the brain s adaptability for recovery Advanced imaging and neurophysiology guide interventions enabling rewiring of neural pathways in individuals with neurological injuries Assistive robotics fuse human potential with sophisticated devices aiding recovery through tailored support These allies enhance muscle activation joint movement and gait training driving functional independence Human machine interaction deciphers neural signals blurring lines between humans and technology A seamless collaboration empowers individuals to guide and benefit from technological assistance Investigating balance control strategies is crucial for designing assistive robotics that revolutionize rehabilitation and mobility By understanding users perspectives we uncover the intricate link between human thinking neuromuscular coordination and balance maintenance This insight informs the development of user centered robotics enhancing natural movement patterns and enabling effective rehabilitation ultimately restoring stability and confidence in mobility
