In the second part of this book set, readers will find general information about the physicochemical properties of several naturally occurring polysaccharides followed by a section dedicated to their application in different fields of research and medicine. Key topics in this part include chitosan properties, modifications and applications, microbial biopolymers, biopolymers present in Brazilian seeds, protein plastic foams, biopolymer microencapsulation in the food industry, biomedical gels, collagen biomaterials, biopolymer electrospinning. This reference is intended for students of applied chemistry and biochemistry who require information about the properties and applications of polysaccharides such as chitosan and other protein-based biopolymers.

Regenerated Cellulose and Composites Mohd Shabbir, 2023-05-27 This book highlights the morphology-property relationship of regenerated cellulose materials and composites as morphology of materials is the key feature and corresponds to associated applications of the materials. It is highly essential to assimilate the literature on morphology-property relationship of cellulose materials. Being the most abundant natural polymer on earth and a gateway to a large number of applications, cellulose is expected to be researched for higher efficiencies. Various books and research articles have targeted the specific morphologies, the respective characteristics and application areas. This book presents literature on morphology-property relationship of cellulose materials and provides a direction to this relationship.

Chitin, Chitosan, Oligosaccharides and Their Derivatives Se-Kwon Kim, 2010-07-14 Biopolymers found in marine animals and plants offer tremendous, largely untapped pharmaceutical potential. Research shows that these biopolymers can be used to combat various infectious as well as inflammatory, oxidative and carcinogenic factors.
