Proceedings of the 2012 International Conference on Communication, Electronics and Automation Engineering George Yang, 2012-08-14 This book is a collection of selected papers from the 2011 International Conference on Communications Electronics and Automation Engineering held in Xi'an, China, August 23-25, 2012. It presents some of the latest research findings in a broad range of interdisciplinary fields related to communications, electronics, and automation engineering. Specific emphasis is placed on the following topics: automation control, data mining and statistics, simulation and mathematical modeling, human factors and cognitive engineering, web technology, optimization and algorithm, and network communications. The prime objective of the book is to familiarize the readers with cutting-edge developments in the research of electronics and automation engineering with a variety of applications. Hopefully, the book can help researchers to identify research trends in many areas, to learn the new methods and tools, and to spark innovative ideas. **Proceedings of the ...**

ASME Design Engineering Technical Conferences, 2007 **Computational Approaches for Aerospace Design** Andy Keane, Prasanth Nair, 2005-08-05 Over the last fifty years, the ability to carry out analysis as a precursor to decision making in engineering design has increased dramatically. In particular, the advent of modern computing systems and the development of advanced numerical methods have made computational modelling a vital tool for producing optimized designs. This text explores how computer-aided analysis has revolutionized aerospace engineering, providing a comprehensive coverage of the latest technologies underpinning advanced computational design. Worked case studies and over 500 references to the primary research literature allow the reader to gain a full understanding of the technology, giving a valuable insight into the world's most complex engineering systems. **Key Features:** Includes background information on the history of aerospace design and established optimization, geometrical, and mathematical modelling techniques, setting recent engineering developments in a relevant context. Examines the latest methods such as evolutionary and response surface based optimization, adjoint, and numerically differentiated sensitivity codes, uncertainty analysis, and concurrent systems integration schemes using grid-based computing. Methods are illustrated with real-world applications of structural statics, dynamics, and fluid mechanics to satellite, aircraft, and aero-engine design problems. Senior undergraduate and postgraduate engineering students taking courses in aerospace vehicle and engine design will find this a valuable resource. It will also be useful for practising engineers and researchers working on computational approaches to design. *Advances in Engineering Design and Optimization II* Di Zheng, Yi Qiang Wang, Yi Min Deng, Ai Bing Yu, Wei Hua Li, 2011-09-27 Selected peer-reviewed papers from the International Conference on Engineering Design and Optimization (ICEDO) 2011, August 19-21, 2011, Ningbo, China.
