and Degrees Stanford University,1982 **Selected Water Resources Abstracts** ,1991 Life on the Margins Patrick Faulkner,2013-12-20 The research presented here is primarily concerned with human environment interactions on the tropical coast of northern Australia during the late Holocene Based on the suggestion that significant change can occur within short time frames as a direct result of interactive processes the archaeological evidence from the Point Blane Peninsula Blue Mud Bay is used to address the issue of how much change and variability occurred in hunter gatherer economic and social structures during the late Holocene in coastal northeastern Arnhem Land The suggestion proposed here is that processes of environmental and climatic change resulted in changes in resource distribution and abundance which in turn affected patterns of settlement and resource exploitation strategies levels of mobility and potentially the size of foraging groups on the coast The question of human behavioural variability over the last 3000 years in Blue Mud Bay has been addressed by examining issues of scale and resolution in archaeological interpretation specifically the differential chronological and spatial patterning of shell midden and mound sites on the peninsula in conjunction with variability in molluscan resource exploitation To this end the biological and ecological characteristics of the dominant molluscan species is considered in detail in combination with assessing the potential for human impact through predation Investigating pre contact coastal foraging behaviour via the archaeological record provides an opportunity for change to recognised in a number of ways For example a differential focus on resources variations in group size and levels of mobility can all be identified It has also been shown that human environment interactions are non linear or progressive and that human behaviour during the late Holocene was both flexible and dynamic **Research and Development in Progress** U.S. Atomic Energy Commission.
