Backpropagation Yves Chauvin, David E. Rumelhart, 2013-02-01 Composed of three sections this book presents the most popular training algorithm for neural networks backpropagation The first section presents the theory and principles behind backpropagation as seen from different perspectives such as statistics machine learning and dynamical systems The second presents a number of network architectures that may be designed to

match the general concepts of Parallel Distributed Processing with backpropagation learning Finally the third section shows how these principles can be applied to a number of different fields related to the cognitive sciences including control speech recognition robotics image processing and cognitive psychology The volume is designed to provide both a solid theoretical foundation and a set of examples that show the versatility of the concepts Useful to experts in the field it should also be most helpful to students seeking to understand the basic principles of connectionist learning and to engineers wanting to add neural networks in general and backpropagation in particular to their set of problem solving methods

Compendium of Terminology and Nomenclature of Properties in Clinical Laboratory Sciences Georges Férard, René Dybkaer, Xavier Fuentes-Arderiu, 2016-11-18 There has been significant expansion and development in clinical laboratory sciences and in particular metrological concepts definitions and terms since the previous edition of this book was published in 1995 It is of prime importance to standardize laboratory reports for reliable exchange of patient examination data without loss of meaning or accuracy New disciplines have appeared and the interrelationships between different disciplines within clinical laboratory sciences demand a common structure and language for data exchange in the laboratory and with the clinicians necessitating additional coverage in this book These new sections will be based upon recommendations published by various national regional and international bodies especially IUPAC and IFCC This book groups and updates the recommendations and will be appropriate for laboratory scientists medical professionals and students in this area

Fundamentals of MRI Elizabeth Berry, Andrew J. Bulpitt, 2008-12-22 Fundamentals of MRI An Interactive Learning Approach explores the physical principles that underpin the technique of magnetic resonance imaging MRI After covering background mathematics physics and digital imaging the book presents fundamental physical principles including magnetization and rotating reference frame It describes how relaxation mechanisms help predict tissue contrast and how an MR signal is localized to a selected slice through the body The text then focuses on frequency and phase encoding It also explores the spin echo sequence its scan parameters and additional imaging sequences such as inversion recovery and gradient echo The authors enhance the learning experience with practical materials Along with questions exercises and solutions they include ten interactive programs on the accompanying downloadable resources These programs not only allow concepts to be clearly demonstrated and further developed but also provide an opportunity to engage in the learning process through guided exercises By providing a solid hands on foundation in the physics of MRI this textbook helps students gain confidence with core concepts before they move on to further study or practical training

Duration and Bandwidth Limiting Jeffrey A. Hogan, Joseph D. Lakey, 2011-12-14 Increasingly important in the field of communications the study of time and band limiting is crucial for the modeling and analysis of multiband signals This concise but comprehensive monograph is the first to be devoted specifically to this subdiscipline providing a thorough investigation of its theory and

applications Through cutting edge numerical methods it develops the tools for applications not only to communications engineering but also to optical engineering geosciences planetary sciences and biomedicine With broad coverage and a careful balance between rigor and readability Duration and Bandwidth Limiting is a particularly original and valuable resource both for mathematicians interested in the field and for professional engineers with an interest in theory While its main target audience is practicing scientists the book may also serve as useful supplemental reading material for mathematically based graduate courses in communications and signal processing

Artificial Neural Nets and Genetic Algorithms Rudolf F. Albrecht, Colin R. Reeves, Nigel C. Steele, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are the subjects of contributions to this volume There are contributions reporting theoretical developments in the design of neural networks and in the management of their learning In a number of contributions applications to speech recognition tasks control of industrial processes as well as to credit scoring and so on are reflected Regarding genetic algorithms several methodological papers consider how genetic algorithms can be improved using an experimental approach as well as by hybridizing with other useful techniques such as tabu search The closely related area of classifier systems also receives a significant amount of coverage aiming at better ways for their implementation Further while there are many contributions which explore ways in which genetic algorithms can be applied to real problems nearly all involve some understanding of the context in order to apply the genetic algorithm paradigm more successfully That this can indeed be done is evidenced by the range of applications covered in this volume
