Educational Data Mining Alejandro Peña-Ayala, 2013-11-08 This book is devoted to the Educational Data Mining arena. It highlights works that show relevant proposals, developments and achievements that shape trends and inspire future research. After a rigorous revision process, sixteen manuscripts were accepted and organized into four parts as follows:

Profile The first part embraces three chapters oriented to:

- 1 describe the nature of educational data mining (EDM)
- 2 describe how to pre-process raw data to facilitate data mining (DM)
- 3 explain how EDM supports government policies to enhance education

Student modeling The second part contains five chapters concerned with:

- 4 explore the factors having an impact on the student's academic success
- 5 detect student's personality and behaviors in an educational game
- 6 predict students' performance to adjust content and strategies
- 7 identify students who will most benefit from tutor support
- 8 hypothesize the student answer correctness based on eye metrics and mouse click

Assessment The third part has four chapters related to:

- 9 analyze the coherence of student research proposals
- 10 automatically generate tests based on competences
- 11 recognize students' activities and visualize these activities for being presented to teachers
- 12 find the most dependent test items in students' response data

Trends The fourth part encompasses four chapters about how to:

- 13 mine text for assessing students' productions and supporting teachers
- 14 scan student comments by statistical and text mining techniques
- 15 sketch a social network analysis (SNA) to discover student behavior profiles and depict models about their collaboration
- 16 evaluate the structure of interactions between the students in social networks

This volume will be a source of interest to researchers, practitioners, professors and postgraduate students aimed at updating their knowledge and find targets for future work in the field of educational data mining.

Revolutionizing K-12 Blended Learning through the i²Flex Classroom Model Avgerinou, Maria D., Gialamas, Stefanos P., 2016-06-20 Blended learning has gained significant attention recently by educational leaders, practitioners and researchers. i²Flex, a variation of blended learning, is based on the premise that certain non-interactive teaching activities such as lecturing can take place by students without teachers' direct involvement. Classroom time can then be used for educational activities that fully exploit teacher-student and student-student interactions, allowing for meaningful, personalized feedback and scaffolding on demand.

Revolutionizing K-12 Blended Learning through the i²Flex Classroom Model presents a well-rounded discussion on the i²Flex model, highlighting methods for K-12 course design, delivery and evaluation, in addition to teacher performance assessment in a blended i²Flex environment. Emphasizing new methods for improving the classroom and learning experience, in addition to preparing students for higher education and careers, this publication is an essential reference source for pre-service and in-service teachers, researchers, administrators and educational technology developers.
