accepted by the scientific mainstream The book was written for non specialist readers and attracted widespread interest upon its publication As Darwin was an eminent scientist his findings were taken seriously and the evidence he presented generated scientific philosophical and religious discussion The debate over the book contributed to the campaign by T H Huxley and his fellow members of the X Club to secularise science by promoting scientific naturalism Within two decades there was widespread scientific agreement that evolution with a branching pattern of common descent had occurred but scientists were slow to give natural selection the significance that Darwin thought appropriate During the eclipse of Darwinism from the 1880s to the 1930s various other mechanisms of evolution were given more credit With the development of the modern evolutionary synthesis in the 1930s and 1940s Darwin s concept of evolutionary adaptation through natural selection became central to modern evolutionary theory now the unifying concept of the life sciences

intellectual activity in ferment at that time The general reader will also find much of contemporary relevance in Mendelssohn's life not only because of his exemplary devotion to reason and tolerance but also because of his lifelong struggle with the basic dilemma of the Jew in the modern world the attraction of assimilation versus the singularity of Jewish life and the preservation of Jewish identity versus integration in the wider society
