Parent—Child Interaction Therapy Toni L. Hembree-Kigin, Cheryl Bodiford McNeil, 2013-06-29 The development and evaluation of Parent Child Interaction Therapy PCIT has been a very rewarding aspect of my academic career and I am excited to see the program detailed in this excellent clinical guide PCIT is a short term intervention with documented effectiveness that has much to offer mental health professionals who work with young behaviorally disordered children After approximately 12 therapy hours improvements can be seen in parenting stress levels parent child interactional patterns parenting skills child disruptiveness and child compliance Yet prior to the publication of this practitioner guide book relatively few child therapists have had exposure to this innovative treatment approach The development of PCIT began in the early 1970s I had recently completed a doctoral program focusing on behavioral parent training procedures and a postdoctoral experience emphasizing traditional play therapy approaches with children Despite the wide theoretical gap between these two orientations I recognized that each had valuable therapeutic elements that could contribute to an overall treatment package It became an exciting challenge to integrate traditional and behavioral concerns I was particularly interested in developing a child behavior modification program with strong relationship based components The work of my colleague Constance Hanf had a direct influence on the development of PCIT Hanf outlined a two stage operant model for modifying the noncompliant behavior of young children The first stage emphasized following the child's lead and using differential attention during play sessions *The General Educator's Guide to Special Education* Jody L.

Management , Andrea Honigsfeld, Audrey Cohan, 2013-12-11 Classroom management is often perceived as the most overwhelming challenge faced by new teachers it may also continue to confront more experienced educators as they encounter a new group of youngsters or face a new set of demands Successful classroom management is invariably tied to student engagement and empowerment teachers who are singled out for excellent classroom management practices are

The contributors offer classroom tested strategies and timely advice on how to create such an effective and supportive instructional environment for academic and social emotional learning for all. Similar to the previous four volumes: *Breaking the Mold of School Instruction and Organization Innovative and Successful Practices for the 21st Century* 2010, *Breaking the Mold of Preservice and Inservice Teacher Education* 2011 and *Breaking the Mold of Education for Culturally and Linguistically Diverse Students* 2012 and *Breaking the Mold of Education Innovative and Successful Practices for Student Engagement Empowerment and Motivation* 2013, the purpose of this book is to offer a carefully selected collection of documented best practices and practical classroom tested strategies for immediate implementation. **Coping with**

DAVID W ELLIS AND ANNE LISE CHRISTENSEN 1 A BRIEF OVERVIEW In the past most people who sustained catastrophic brain injury died. However, over the past several decades, sophisticated medical diagnostic techniques such as computerized tomography (CT) and magnetic resonance imaging (MRI) along with advances in emergency trauma procedures and neurosurgical procedures e.g. intracranial pressure monitoring have dramatically increased the survival rates for people who have survived such trauma. At the same time, because of population growth, the number of victims of brain trauma, primarily automobile accidents, has also risen. As a result of their injuries, many of these people have developed severe disabilities that affect their lives and the lives of everyone around them. For those who survive, mere survival is not enough. Attention must be paid to the quality of their lives after the traumatic event. During the past 15 years, there has been an increasing focus on the development of treatment techniques for brain injuries. Although the principal focus of this text is on the neuropsychological i.e. neurological and psychological aspects of treatment, both theory and technique, the book is also directed towards the broad variety of issues that affect survivors, their families, health care professionals and the social milieu.
