than biases or previous practice must determine assessment practices that are selected and used for particular purposes. Similar to a handbook in its comprehensive topical coverage, this edited collection provides a contextual foundation for academic assessment and intervention, describes both norm-referenced and curriculum-based assessment measurement in detail, considers the implications of both of these assessments on ethnically diverse populations, provides a clear link between assessment evidence-based interventions and the RTI model, and considers other important topics related to this area such as teacher behavior. Intended primarily for graduate-level courses in education, school psychology, or child clinical psychology, it will also be of interest to practicing professionals in these fields.
