Carbon Conflicts and Forest Landscapes in Africa Melissa Leach,Ian Scoones,2015-06-05 Amidst the pressing challenges of global climate change the last decade has seen a wave of forest carbon projects across the world designed to conserve and enhance forest carbon stocks in order to reduce carbon emissions from deforestation and offset emissions elsewhere Exploring a set of new empirical case studies *Carbon Conflicts and Forest Landscapes in Africa* examines how these projects are unfolding their effects and who is gaining and losing Situating forest carbon approaches as part of more general moves to address environmental problems by attaching market values to nature and ecosystems it examines how new projects interact with forest landscapes and their longer histories of intervention The book asks what difference does carbon make What political and ecological dynamics are unleashed by these new commodified marketized approaches and how are local forest users experiencing and responding to them The book s case studies cover a wide range of African ecologies project types and national political economic contexts By examining these cases in a comparative framework and within an understanding of the national regional and global institutional arrangements shaping forest carbon commoditisation the book provides a rich and compelling account of how

and why carbon conflicts are emerging and how they might be avoided in future This book will be of interest to students of development studies environmental sciences geography economics development studies and anthropology as well as practitioners and policy makers *Global Challenges to CSR and Sustainable Development* Stephen Vertigans, Samuel O. Idowu, 2021-02-24 This book examines and analyzes the challenges programmes for Corporate Social Responsibility CSR and sustainable development are facing in global management practice It looks at the dichotomy of a general and popular demand for responsible and resilient management and the counterplayers that impact the positive effect of such efforts The book assembles latest research looking at the root causes for this opposition and new case studies that showcase the dilemma and possible solutions to overcome it Overall the book juxtaposes short terminism within CSR programmes and longer term sustainable development mis allocation of resources and failed promises associated with CSR and sketches pathways how CSR and sustainable development can be directed towards the most pressing issues *STEM Education in Poverty* Brantina Chirinda, Gladys Sunzuma, Perkins Muredzi, 2025-07-15 This book is about Science Technology Engineering and Mathematics STEM education in poverty and the lessons we learn from Zimbabwe The world is driving towards the fourth Industrial Revolution 4IR where economic growth has been attributed to STEM education STEM education is vital in this era where both developed and developing countries are undergo rapid changes Globally STEM education has been practised differently in schools and universities University programs new school curricula instructional methods extracurricular programs and professional development programs for in service teachers have been created to cater to STEM subjects STEM education is envisioned to produce critical thinkers inventors creators problem solvers innovators and professionals who will solve the world s ever changing challenges including inequity food insecurity climate change inequality and poverty STEM is essential to modern education Zimbabwe has faced significant economic challenges but has made remarkable strides in STEM education By examining the successes and challenges of STEM education in Zimbabwe we can learn valuable lessons about improving STEM education in underserved communities This book contributes to the international debate surrounding the optimal STEM education for students in underserved schools It incorporates detailed accounts of STEM education in Zimbabwe schools shedding light on the challenges students and educators face in impoverished areas In Zimbabwe STEM education faces significant challenges such as materials and facilities pedagogy policy reform access and relevance Some of the main issues highlighted in this book are the need for more resources including funding teaching materials and adequate laboratories Effective STEM pedagogy is hampered by an education system that emphasises the curriculum and teacher centred focus instead of focusing on how students can be taught or learn Research has shown that in Zimbabwe STEM teachers must apply inventive pedagogies and suitable learner centred STEM teaching approaches As a result there is a need for more STEM related programs and courses in schools and universities to improve the opportunities for students to pursue careers in these fields Another challenge is the need for more awareness

about the opportunities and importance of STEM education and interest in STEM subjects among students which can be attributed to a lack of exposure and understanding of the relevance and importance of these fields in today's world. While lack of resources and other challenges hinder effectiveness, opportunity lies in promising pathways of policy and practice. In Zimbabwe, there is a varying degree of success in the implemented competence-based curriculum which emphasises inquiry-based learning and STEM education. Finally, there is a need for early exposure to STEM-based career opportunities and for more collaboration between the government, private sector and educational institutions to address these challenges and promote STEM education in Zimbabwe. This book uses Zimbabwe as an example to explore STEM education in poverty. By examining the successes and challenges of STEM education in Zimbabwe, this book offers valuable insights into how STEM education can be integrated into the curriculum in countries with developing and emerging economies. This book is an essential resource for anyone interested in improving STEM education in underserved communities. International

The SAGE Encyclopedia of World Poverty Mehmet Odekon, 2015-06-15. The *SAGE Encyclopedia of World Poverty* Second Edition addresses the persistence of poverty across the globe while updating and expanding the landmark work *Encyclopedia of World Poverty* originally published in 2006 prior to the economic calamities of 2008. For instance, while continued high rates of income inequality might be unsurprising in developing countries such as Mexico, the Organization of Economic Co-operation and Development (OECD) reported in May 2013 even countries with historically low levels of income inequality have experienced significant increases over the past decade including Denmark, Sweden and Germany. The UN and the World Bank also emphasize the persistent nature of the problem. It is not all bad news. In March 2013 the *Guardian* newspaper reported: 'Some of the poorest people in the world are becoming significantly less poor according to a groundbreaking

academic study which has taken a new approach to measuring deprivation The report by Oxford University's poverty and human development initiative predicts that countries among the most impoverished in the world could see acute poverty eradicated within 20 years if they continue at present rates On the other hand the U N says environmental threats from climate change could push billions more into extreme poverty in coming decades All of these points lead to the need for a revised updated and expanded edition of the Encyclopedia of World Poverty Key Features 775 evaluated and updated and 175 entirely new entries New Reader's Guide categories Signed articles with cross references Further Readings will be accompanied by pedagogical elements Updated Chronology Resource Guide Glossary and thorough new Index The SAGE Encyclopedia of World Poverty Second Edition is a dependable source for students and researchers who are researching world poverty making it a must have reference for all academic libraries

Inequality and Political Cleavage in Africa

Catherine Boone, 2024-04-25 This pathbreaking work integrates African countries into broader comparative theories of how spatial inequality shapes political competition over the construction of markets states and nations Existing literature on African countries has found economic cleavages institutions and policy choices to be of low salience in national politics This book inverts these arguments Boone trains our analytic focus on the spatial inequalities and territorial institutions that structure national politics in Africa showing that regional cleavages find expression in both electoral competition and policy struggles over redistribution sectoral investment market integration and state design Leveraging comparative politics theory Boone argues that African countries regional and core periphery tensions are similar to those that have shaped national economic integration in other parts of the world Bringing together electoral and economic geography the book offers a new and powerful map of political competition on the African continent

Mediel Hove, Geoff Harris, 2019-06-14 Cultures of violence are characteristic of many countries in sub Saharan Africa and attempts to move towards cultures of peace have often proved difficult and ineffectual And yet the wide variations in levels of violence within and between countries show that it is not inevitable rather it is the result of choices made at individual community and societal levels This book examines the potential of peace infrastructures as vehicles to strengthen and spread progress towards cultures of peace Peace infrastructures vary hugely in sophistication and level The examples examined in this book range from tiny structures which help resolve conflicts between individuals and within community organisations peace committees which serve local communities peace education and peace club programmes in schools mediation mechanisms to prevent election violence and to ministries of peace to coordinate government and non government efforts in peacemaking and peacebuilding The overall finding is that the development of peace infrastructures at all levels has great potential to build cultures of peace 1 It is the only book available which documents the experience and potential of nonviolence in post independence sub Saharan Africa 2 It makes a persuasive case for the development of various peace infrastructures in order to make peace sustainable 3 It explains how strategic planning can be utilised both to bring about
