**Slow Burn** R. Jisung Park, 2025-07-29 How the subtle but significant consequences of a hotter planet have already begun from lower test scores to higher crime rates and how we might tackle them today It s hard not to feel anxious about the problem of climate change especially if we think of it as an impending planetary catastrophe In *Slow Burn* R Jisung Park encourages us to view climate change through a different lens one that focuses less on the possibility of mass climate extinction in a theoretical future and more on the everyday implications of climate change here and now Drawing on a wealth of new data and cutting edge economics Park shows how climate change headlines often miss some of the most important costs When wildfires blaze what happens to people downwind of the smoke When natural disasters destroy buildings and bridges what happens to educational outcomes Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations imperceptibly elevated health risks spread across billions of people pennies off the dollar of productivity fewer opportunities for upward mobility By investigating how the physical phenomenon of climate change interacts with social and economic institutions Park illustrates how climate change already affects everyone and may act as an amplifier of inequality Wealthier households and corporations may adapt quickly but without targeted interventions less advantaged communities may not Viewing climate change as a slow and unequal burn comes with an important silver lining It puts dollars and cents behind the case for aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects We can begin to overcome our climate anxiety Park shows us when we begin to tackle these problems locally

*Paradigmatic Shifts in Geographical Thought* Lalita Rana, 2020-01-01 In advancing disciplines like Geography the methodological debate is a sign of health In Geography there has been extreme diversity of viewpoints on both philosophy and methodology with constant extension and also a shift in focus The methodology of geography came under debate for the first time during the middle of twentieth century when the paper published by F K Schaefer an American scholar brought both the qualitative and quantitative revolution in geographic development Shortly after this publication were discussed the paradigmatic shifts in a discipline by Thomas S Kuhn another

American scholar through his seminal work in which he painted a picture of the development of science quite unlike that had gone before. In order to elucidate this process of development of science Kuhn prepared a model termed as the Paradigm of Science. Distinct parallels may be sought between the historical evolution of scientific discipline as explained by Thomas Kuhn and the historical evolution of the discipline of geography. Seeking inspiration from the works of both of the great scholars mentioned above, the present book examines the evolution of geographical thought from the perspective of Thomas Kuhn. Two publications of mine (2008, 2014) are on this line only. However, the methodological literature to understand the philosophical background making possible this disciplinary growth is too small. The purpose here is to explore and screen the growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline. Accordingly, the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline.

Global Cities Robert Gottlieb, Simon Ng, 2018-08-28. How Los Angeles, Hong Kong and China deal with such urban environmental issues as ports, goods movement, air pollution, water quality, transportation and public space. Over the past four decades, Los Angeles, Hong Kong and key urban regions of China have emerged as global cities in financial, political, cultural, environmental and demographic terms. In this book, Robert Gottlieb and Simon Ng trace the global emergence of these urban areas and compare their responses to a set of six urban environmental issues. These cities have different patterns of development. Los Angeles has been the quintessential horizontal city, the capital of sprawl. Hong Kong is dense and vertical. China's new megacities in the Pearl River Delta created by an explosion in industrial development and a vast migration from rural to urban areas combine the vertical and the horizontal. All three have experienced major environmental changes in a relatively short period of time. Gottlieb and Ng document how each has dealt with challenges posed by ports and the movement of goods, air pollution. Los Angeles, Hong Kong and urban China are all notorious for their hazardous air quality. Water supply: all three places are dependent on massive transfers of water and water quality, the food system from seed to table, transportation and public and private space. Finally, they discuss the possibility of change brought about by policy initiatives and social movements.
