## **Nsf Haccp Manual:**

**Application of HACCP for Distribution System Protection** Kathy Martel, 2006 **OBJECTIVES** The purpose of this project was to evaluate the application of the Hazard Analysis Critical Control Point HACCP system a risk management tool to better protect water quality in distribution systems **BACKGROUND** HACCP was first conceived in 1959 by the Pillsbury Company to improve food safety for NASA's manned space missions Since the 1980s HACCP has been widely adopted by the food and beverage industry worldwide where it forms an important part of their food safety plans Since the mid 1990s HACCP has been applied by a number of individual drinking water systems and has been incorporated into many drinking water regulatory requirements and guidelines around the globe **HIGHLIGHTS** Project pilot studies illustrated that HACCP can be applied to water distribution systems but time and resource requirements were greater than anticipated Project case studies showed that most utilities that achieved HACCP certification had first implemented ISO 9001 and ISO 14001 or similar systems to gain management control of people and processes The case study utilities operated one integrated management system including the ISO systems as well as HACCP to avoid duplication of tasks reduce staff time and costs and improve process integration All case study utilities believed that overall the benefits of the HACCP system outweighed the costs

Countries have been competing against each other in order to attract financial investment and human capital for decades. However, emerging economies have a long way to go before they achieve the same levels of competitiveness as a developed economy. Lack of firm institutions, inadequate infrastructure, and a lack of trust in the legal system are urgent and unavoidable factors that emerging economies must address. The Handbook of Research on Increasing the Competitiveness of SMEs provides innovative insights on integrating, adapting, and building models and strategies compatible with the development of competitiveness in small and medium enterprises in emerging countries. The content within this publication examines quality management, organizational leadership, and digital security. It is designed for policymakers, entrepreneurs, managers, executives, business professionals, academicians, researchers, and students.

*Food Protection Trends*, 2005. Drinking Water Distribution Systems. National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Public Water Supply Distribution Systems: Assessing and Reducing Risks, 2007-01-22. Protecting and maintaining water distribution systems is crucial to ensuring high quality drinking water. Distribution systems consisting of pipes, pumps, valves, storage tanks, reservoirs, meters, fittings, and other hydraulic appurtenances carry drinking water from a centralized treatment plant or well supplies to consumers. Taps spanning almost 1 million miles in the United States, distribution systems represent the vast majority of physical infrastructure for water supplies and thus constitute the primary management challenge from both an operational and public health standpoint. Recent data on waterborne disease outbreaks suggest that distribution systems remain a source of contamination that has yet to be fully addressed. This report evaluates approaches for risk characterization and recent data, and it identifies a variety of strategies that could be considered to reduce the risks posed by water quality deteriorating events in distribution systems. Particular attention is given to backflow events via cross connections, the potential for contamination of the distribution system during construction and repair activities, maintenance of storage facilities, and the

role of premise plumbing in public health risk The report also identifies advances in detection monitoring and modeling analytical methods and research and development opportunities that will enable the water supply industry to further reduce risks associated with drinking water distribution systems
