Scientific and Technical Aerospace Reports ,1994 *Beam Test Calorimeter Prototypes for the CMS Calorimeter Endcap Upgrade* Thorben Quast, 2022-01-24 In order to cope with the increased radiation level and the challenging pile up conditions at High Luminosity LHC the CMS collaboration will replace its current

calorimeter endcaps with the High Granularity Calorimeter HGCAL in the mid 2020s This dissertation addresses two important topics related to the preparation of the HGCAL upgrade experimental validation of its silicon based design and fast simulation of its data Beam tests at the DESY Hamburg and the CERN SPS beam test facilities in 2018 have been the basis for the design validation The associated experimental infrastructure the algorithms deployed in the reconstruction of the recorded data as well as the respective analyses are reported in this thesis First core components of the silicon based prototype modules are characterised and it is demonstrated that the assembled modules are functional In particular their efficiency to detect minimum ionising particles MIPs traversing the silicon sensors is found to be more than 98% for most of the modules No indication of charge sharing between the silicon pads is observed Subsequently the energy response is calibrated in situ using the beam test data Equalisation of the different responses among the readout channels is achieved with MIPs hereby deploying the HGCAL prototype as a MIP tracking device The relative variation of the inferred calibration constants amounts to 3% for channels on the same readout chip The calibration of the time of arrival information is performed with an external time reference detector With it timing resolutions of single cells including the full prototype readout chain around 60ps in the asymptotic high energy limit are obtained The calorimetric performance of the HGCAL prototype is validated with particle showers induced by incident positrons and charged pions For electromagnetic showers the constant term in the relative energy resolution is measured to be 0.52 ± 0.08 % whereas the stochastic term amounts to 22.2 ± 0.3 % GeV This result is in good agreement with the calorimeter simulation with GEANT4 The prototype's positioning resolution of the shower axis after subtracting the contribution from the delay wire chambers in the beam line used as reference is found to be below 0.4 mm at 300 GeV At the same energy the angular resolution in the reconstruction of the electromagnetic shower axis in this prototype is measured to be less than 5mrad The analysis of the hadronic showers in this thesis makes use of the state of the art machine learning methods that exploit the calorimeter's granularity It is indicated that the energy resolution may be improved using software compensation and also that the separation of electromagnetic and charged pion induced showers in the calorimeter may benefit from such methods The measurements of the hadronic showers are adequately reproduced by GEANT4 simulation Altogether the obtained results from the analysis of the beam test data in this thesis are in agreement with the full functionality of the silicon based HGCAL design The final part of this thesis provides a proof of principle that generative modelling based on deep neural networks in conjunction with the Wasserstein distance is a suitable approach for the fast simulation of HGCAL data Instead of sequential simulation a deep neural network based generative model generates all calorimeter energy depositions simultaneously This generator network is optimised through an adversarial training process using a critic network guided by the Wasserstein distance The developed framework in this thesis is applied to both GEANT4 simulated electromagnetic showers and to positron data from the beam tests Ultimately this fast simulation approach is up to four orders of magnitude faster than sequential simulation with GEANT4 It is able to

produce realistic calorimeter energy depositions from electromagnetic showers incorporating their fluctuations and correlations when converted into typical calorimeter observables *Technical Abstract Bulletin* , Monthly Catalogue, United States Public Documents ,1994 **Student Solutions Manual and Study Guide for Serway and Jewett's Physics for Scientists and Engineers, Sixth Edition** John R. Gordon,Ralph V. McGrew,Raymond A. Serway,2004 Written by John R Gordon Ralph McGrew and Raymond Serway the two volume manual features detailed solutions to 20 percent of the end of chapter problems from the text This manual also features a list of important equations concepts and answers to selected end of chapter questions **The APRN and PA's Complete Guide to Prescribing Drug Therapy 2024** Mari J. Wirfs,2024-03-19 An unrivaled reference tool for advanced practice providers and students in clinical practice settings This concise and easy to read drug therapy prescribing reference provides critical information for advanced practice nurses and physician assistants in clinical practice settings who are involved in the primary care management of patients with acute episodic and chronic health problems life altering and life threatening diseases and needs for health promotion and disease prevention Interspersed with clinically useful information such as monitored laboratory values patient teaching points and safety information this reference draws upon data taken directly from FDA approved drug labels and patient medication guides and is organized by diagnosis rather than by drug classification to provide advanced practice practitioners with the comprehensive concise and up to date information on drug therapies that they need to help achieve positive outcomes in their daily practice The first section of this book presents drug treatment regimens for over 700 clinical diagnoses listed alphabetically by generic name followed by important information required for prescription decision making The second section provides additional information on treatment organized in a convenient table format An alphabetical cross reference index of drugs allows for easy identification of alternate drug names and their location within the text New to this Edition Information on over 100 new diagnoses and over 100 new generic drugs indicated for the treatment of quality of life altering and life threatening conditions such as chronic kidney disease genetic diseases mesothelioma MS metastatic cancers and rare diseases Updates on drugs used for site specific cancers mental health issues and commonly diagnosed diseases such as diabetes and asthma Details on new drug approvals including indications treatment regimens adverse reactions drug drug interactions warnings and precautions and use in special populations Key Features Provides new drug treatment regimens for drugs that are first in class novel drugs orphan drugs new drugs with breakthrough or fast track designation and drugs with new indications and expanded social populations Includes drug prescribing information on diseases prevalent outside of North America including endemic diseases with known transmission and treatment interventions Serves advanced practice providers across the United States and internationally Consistent with approvals and recommendations for use by the FDA
