INTRODUCTION A LA PSYCHOLOGIE COGNITIVE

4 grands domaines :

- Psycho clinique + patho
- Psycho sociale
- Psycho du dev

- Psycho cognitive : processus cognitifs qui nous permettent de traiter des informations
 - ⇒ Traitement des informations, comment ça se passe, les mécanismes etc.
 - ⇒ Domaine de la psychologie le + vaste en termes de recherches.

La psychologie sociale, cognitive et développementale sont des disciplines expérimentales (collecte d'informations bar le biais d'expériences).

Thèmes partagés entre les neurosciences et la psychologie.

Les humains sont spontanément dualistes et tiennent à le rester.

Dualiste : conception philosophique et épistémologique suivant laquelle il existerait dans l'homme deux substances distinctes dans leur essence : le corps et l'esprit.

Ils pensent naturellement et intuitivement qu'ils ont un esprit, une âme, un moi qui est quelque chose en plus de leur cerveau.

Tous les enfants développent cette intuition avant même qu'ils ne reçoivent une éducation religieuse ou formation philosophique.

Cette conception universelle, 10 000 religions qui existent dans le monde est soutenue par une pensée immatérialiste.

Le cerveau peut s'étudier d'un point de vue psychologique et neuroscientifique.

I. Un problème philosophique, épistémologique et métaphysique :

Philosophique : hantée par l'apparente coexistence de l'esprit et de la matière

Epistémologique : comment peut-on appréhender notre monde si ce dernier est composé de matière et d'esprit.

Métaphysique : poser l'existence de l'âme, comme élément irréductible à la matière et potentiellement éternel est au cœur de toutes les eschatologies (parties de la religion qui s'intéressent à notre devenir après la mort)

Il y a 2 théories philosophiques qui s'opposent :

- Physicaliste
- Dualiste => interaction entre l'esprit et la matière

Psychologie Cognitive Hu Psycho:

Remédiation cognitive Nicolas FRANCK, 2023-06-20 La remédiation cognitive est un outil de soin destin à renforcer les ressources cognitives afin de restaurer la capacité de percevoir, comprendre, décider et agir. Elle vise à réduire les conséquences de troubles cognitifs pouvant avoir un fort retentissement négatif sur la capacité des personnes à affronter leur quotidien, leurs relations interpersonnelles et à s'insérer professionnellement. Des altérations de l'attention, de la mémoire des fonctions exécutives et visuospatiales et de la cognition sociale sont associées aux troubles psychiques sévères dont la schizophrénie et les troubles bipolaires, la dépression, aux troubles neurodéveloppementaux dont les troubles du spectre de l'autisme et les déficits de l'attention avec ou sans hyperactivité, aux lésions cérébrales consécutives, en particulier un traumatisme crânien, un accident vasculaire ou une alcoolodépendance et aux affections neurodégénératives. La remédiation cognitive intervient après un bilan neuropsychologique préalable lorsque les troubles sont stabilisés et que le traitement psychotrope a réduit la posologie minimale efficace. Les compétences acquises en séances peuvent être appliquées dans des situations autres que celles travaillées et doivent permettre au patient de mieux faire face aux situations quotidiennes favorisant ainsi son rétablissement. Les programmes de remédiation cognitive reposent sur la réalisation d'exercices spécifiques verbaux écrits ou informatisés dans le cadre de séances groupales ou individuelles. Cette troisième édition entièrement revue, enrichie et actualisée par les spécialistes du domaine tient compte des travaux scientifiques récents. Elle décrit les supports et programmes de remédiation cognitive et leur mise en œuvre en s'appuyant sur des exemples pratiques. Cet ouvrage est destiné à tous les professionnels et futurs professionnels de santé mentale, notamment les psychiatres, les psychologues, les infirmiers et les ergothérapeutes.

The Psychology of Art Appreciation Bjarne Sode Funch, 1997 This book is more than an introduction to the psychology of art appreciation it puts into perspective the research carried out within the area and offers a new understanding of the relationship between art and viewer A number of studies within the psycho physical cognitive psychoanalytic and existential phenomenological schools of thought are

presented in order to demonstrate how their views on the appreciation of visual art vary Five different types of art appreciation ranging from a spontaneous preference for a work of art to a blissful experience of transcendence are identified and described **International Directory of Psychologists, Exclusive of the U.S.A.** Kurt Pawlik, International Union of Psychological Science, 1985 Divided geographically by country Each section includes societies associations of psychology in a given country as well as the historical development and current state of psychology the current major research programs and a brief account of academic training in psychology and the legal status of psychology as a profession in each country Finally each country entry includes a directory of psychologists within its borders including address and area of specialization **Neuroscientific based therapy of dysfunctional cognitive overgeneralizations caused by stimulus overload with an "emotionSync" method** Christian Hanisch, 2019-03-11 In this book Prof UCN Dr Christian Hanisch has now published his dissertation with the scientific investigations statistical evaluations and the results The research shows that trauma depression anxiety and much else can be caused by mental blockages and how to counteract this through neuro coaching How psychotherapy or coaching based on physical and physiological especially neuroelectric principles can work he makes clear on the basis of comprehensible test series **Lifespan Cognition** Ellen Bialystok, Fergus I. M. Craik, 2006 Aims to create a bridge across cognitive development and cognitive aging This volume studies the rise and fall of specific cognitive functions such as attention executive functioning memory working memory representations and individual differences to find ways in which the study of development and decline converge on common mechanisms Clinical Hypnosis Ernil Hansen, Burkhard Peter, Thomas Gerhard Wolf, 2024-09-02 Hypnosis is an interaction where a trance state of consciousness is induced and utilized to produce beneficial psychological and physiological changes by suggestions Used since ancient times today it is a scientific highly effective treatment in medicine freed from authoritarian manipulative and esoteric burden It allows communication with the unconscious mind where otherwise unrecognized and are organized and regulated A major advantage for patients is that after simple guidance they can use it themselves in the form of self hypnosis Moreover in acute medicine such as emergencies or surgeries patients often enter a natural trance state all by itself making hypnotic induction dispensable and hypnotic communication easy and fundamental However the potential of hypnosis is yet widely unknown or underrepresented both in psychotherapy and somatic medicine A deeper knowledge of clinical hypnosis and a wider distribution of relevant study results can bridge the historical living apart and bring back hypnosis to medicine Hypnosis and suggestions provide a model to explain a wide variety of beneficial as well as harmful effects in medicine and thus supplement the placebo nocebo model In addition hypnosis and hypnotherapy opens interesting scientific insights into human brain functions and into character and functioning of suggestions The goal of leaving the very special setting of books and hypnosis journals and presenting hypnosis to a wide spectrum of readers in psychology and medicine is to increase its visibility its impact and application The application concerns both the specific

treatment of specific patients with specific complaints by an expert called hypnotherapy and the more general use of therapeutic hypnotic communication of health care personnel with all patients in all medical situations On the other hand hypnosis could benefit from a possible desirable stimulation of further research in this field **Psychologie** ,1982

Human Behavior in Global Perspective Marshall H. Segall,1999 This book emphasizes the need to explore human
behavior in its socio cultural context Designed for upper level undergraduate courses or graduate level courses Crisis
Management in Acute Care Settings Michael St.Pierre,Gesine Hofinger,Cornelius Buerschaper,Robert Simon,2011-06-28
Critical situations in acute and emergency care are one of the great clinical challenges because of the uncertainty high
stakes time pressure and stress that are involved This book provides a comprehensive outline of all the human factors issues
relevant to patient safety during acute care Following an initial section discussing the basic principles of human behavior and

decision making the various influences on safe patient care are discussed in depth These are divided into three interacting groups individual factors team factors and organizational factors Relevant psychological theories are carefully examined and case studies and descriptions of proven strategies help to ground these theories in daily practice This newly revised edition in which each chapter has been enlarged and updated will help both physicians and non physicians to better understand the principles of human behavior and decision making in critical situations and thus to provide safer treatment
