Career Research Paper

The career that I had in mind when I first began college was one in counseling psychology. Luckily, this career was one matched closely to my interests and personality type. Although I've begun considering other career avenues, I still chose to research this specific career in depth.

A person in counseling psychology will typically use personality tests/assessments, interviews, case histories, and observation methods to evaluate a patient's problems, needs, and goals. Counseling psychologists will evaluate data and, from there, create an action plan or treatment plan to counsel the patient with. The goal in this career is to help each patient work toward developing and adjusting social, educational, personal, and vocational skills.

I'm most definitely interested in this career. I've always had an interest in listening to people and their "problems". Even in my early teenage years, and now into my adult years, people of all ages have come to me for emotional support, advice, and confidentiality. I've wondered what people see in me, but have always been humbled by the trust people place in me. The idea of helping people achieve a happier lifestyle is thrilling to me. The idea of being the person that one person can talk to about anything is very exciting and fulfilling to me; I love the idea of being a problem solver.

I see this career as having many advantages and few disadvantages. From a personal standpoint, the biggest disadvantage or problem I foresee is becoming too wrapped up in a patient's problems. I tend to worry, so this roadblock may be one to

Vocational Psychological and Organisational Perspectives on Career

,2009-01-01 It has long been lamented that although several disciplines contribute to career scholarship they work in isolation from one another thus denying career theory research and practice the benefits that multidisciplinary collaboration would bring This constitutes a lost opportunity at a time when new understandings and approaches are needed in order to respond effectively to global changes in society and work This book takes a major step towards remedying this situation by bringing together two key perspectives on career the vocational psychological and the organisational interpreted broadly to include organisation behaviour and human resource management Written by international experts the book opens by identifying some of the tributaries that flow into the great delta of careers scholarship and noting the need to link what are at present separate islands of scholarship It is structured to allow comparison between the ways in which the two perspectives address career development and career management theory research and interventions It concludes by pointing to the possibilities for dialogue and even collaboration between these perspectives and suggesting ways in which these could be brought about The book will be essential reading for career scholars because with its potential to stimulate new thinking and developments in theory and research and also importantly in practice with beneficial spin offs for policy makers this dialogue could open a new phase in career scholarship With its overviews of the history theory research and practice of both perspectives the book will also be a valuable resource for students of both perspectives

Handbook of Clinical Psychology in Medical Settings Jerry J. Sweet,Ronald H. Rozensky,Steven M. Tovian,1991-04-30 For two decades I have been responding to questions about the nature of health psychology and how it differs from medical psychology behavioral medicine and clinical psychology From the beginning I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology I have repeatedly used an analogy to Newell and Simon's General Problem Solver program of the late 1950s and early 1960s which had two major functional parts in addition to the executive component One was the problem solving core the procedural competence the other was the representation of the problem environment In the analogy the concepts knowledge and techniques of psychology constitute the core competence the health system in all its complexity is the problem environment A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system Quite apparently there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system I hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition Joseph Matarazzo has said that there are no specialties in psychology cited in the editors preface to this book
