English Teaching Forum, 1969 *Constructing Rhetorical Education* Davida Charney, Wilma R. Ebbitt, 1992. In nineteen essays illustrating its many aspects, this book offers an argument for what it takes to construct a complete rhetorical education. The editors take an approach that is pragmatic and pluralistic based as it is on the assumptions that a rhetorical education is not limited to teaching freshman composition or any specific writing course and that the contexts in which such an education occurs are not limited to classrooms. This thought provoking volume stresses that while a rhetorical education results in the growth of writing skills, its larger goal is to foster critical thinking.

Mankind is the only speaking species on earth Hence language is supposed to have a genetic basis no matter whether it relies on general intelligence or on a linguistic module This study proposes that universal formal properties of the linguistic code emerged from the genetic code through duplication The proportion of segmental duplication is clearly higher in the human genome than in any other species and duplication took place 6 million years ago when humans separated from the other hominid branches The evolution of language is therefore supposed to be a gradual process with a break This book describes a lot of striking formal resemblances the genetic code and the linguistic code hold in common The book aims to reconcile generative grammar with cognitive semiotics showing that both of them constitute instances of embodiment
