

6. **Predict:** You will now use the observations you have made so far to predict what the strength of the field will be at point (0, 50).

A. Using the right-hand rule, which direction is the magnetic field at (0, 50)?

South

B. Since the magnetic field of the Earth and the induced field are at right angles, you can use the **Pythagorean Theorem** to determine the strength of the combined field.

This theorem states that the square of the length of a right triangle's hypotenuse (c) is equal to the sum of the squares of the lengths of the two legs (a and b): $a^2 + b^2 = c^2$. In this situation, a is the strength of Earth's magnetic field and b is the strength of the induced magnetic field.

Based on the strength of field at points (50, 0) and (-50, 0), what do you think the strength of the magnetic field will be at point (0, 50)?  Show your work below.

Strength of field at (0, 50):

2.06

$$(0.5)^2 + (2.0)^2 = C^2$$

$$4.25 = C^2$$

$$2.06 = C$$
