form of treatment immediately raised ethical questions which had never been questioned before centering around equity of access to treatment when and if treatment could be denied and worst of all the agonising decision of when once established it should be stopped Spiralling costs as the true number of people with kidney failure became evident raised major political and financial questions which were addressed in different countries in different ways which reflected but also helped change patterns of how medical care is provided In developed countries the problem could be solved by allocating a disproportionate amount of money to the treatment of relatively few kidney patients but in the developing world the cost of treatment still limits its availability as it does all forms of modern health care Nevertheless today almost one million people world wide are maintained alive following terminal kidney failure two thirds of them by various forms of dialysis and the remainder bearing kidney transplants almost always placed after a period on dialysis The story is also the sum of the often heroic lives of these hundreds of thousands of patients a few of whom have today been maintained alive and active for more than 35 years and many of whom suffered known but also unexpected complications as a result of their treatment
