Unit One: Sequences and Bivariate Data

Unit Overview	Essential Questions	Academic Vocabulary	AP College Readiness
In prior courses, students have learned to analyze patterns and investigate linear and nonlinear functions. This unit continues the study of patterns and functions by introducing students to arithmetic and geometric sequences and series, recursive relationships, and best-fit linear models.	How are recursive relationships used to model and investigate long term behavior involving sequential change? How are median fit and least squares regression fit lines used to develop models for bivariate data?	• infinite sequence • converge • interpolation • sigma notation • diverge • extrapolation • correlation coefficient • regression line • residual	Unit 1 continues to develop the algebra and graphing of functions. It extends students' understanding of the properties and language of lines of best fit and sequences and series by: • Providing contextual situations where arithmetic and geometric sequences and series can be applied. • Allowing students the opportunity to work with sequences and series in a variety of ways: graphical, analytical, numerical, and verbal. • Establishing an introductory understanding of convergence and divergence of sequences and series as listed in the course description for AP Calculus. • Using technology to explore, interpret results, and support conclusions. • Giving students the opportunity to collect, analyze, and draw conclusions from data as described in the topic list for AP Statistics.

The Art of Teaching Children Phillip Done, 2023-07-18

An essential guide for teachers and parents that s destined to become a classic *The Art of Teaching Children* is one of those rare and masterful books that not only defines a craft but offers a magical reading experience After more than thirty years in the classroom award winning teacher Phillip Done decided that it was time to retire But a teacher s job is never truly finished and he set out to write the greatest lesson of his career a book for educators and parents that would pass along everything he learned about working with kids From the first day of school jitters to the last day s tears Done writes about the teacher s craft classrooms and curriculums the challenges of the profession and the reason all teachers do it the children Drawing upon decades of experience Done shares time tested tips and sage advice Real learning is messy not linear Greeting kids in the morning as they enter the classroom is an important part of the school day If a student is having trouble look at what you can do differently before pointing the finger at the child Ask yourself Would I want to be a student in my class When children watch you they are learning how to be people and one of the most important things we can do for our students is to model the kind of people we would like them to be Done tackles topics you won t find in any other teaching book including Back to School Night nerves teacher pride the Sunday Blues Pinterest envy teacher guilt and the things they never warn you about in teacher school but should like how to survive recess duty field trips and lunch supervision Done also addresses some of the most important issues schools face today bullying excessive screen time the system s obsession with testing teacher burnout and the ever increasing demands of meeting the diverse learning needs of students But *The Art of Teaching Children* is more

than a guide to educating today's young learners. These pages are alive with inspiration, humor, and tales of humanity. Done welcomes us like visitors at Open House Night to the world of elementary school where we witness lessons that go well and others that flop, periods that run smoothly and ones that go haywire when a bee flies into the room. We meet master teachers and new ones, librarians and lunch supervisors, principals and parents, some with too much time on their hands. We get to know kids who want to hold a ball and those who'd rather hold a marker, students with difficult home lives and children with disabilities, youngsters who need drawing out and those who happily announce in the middle of a math lesson that they have a loose tooth. With great wit and wisdom, irresistible storytelling, and boundless compassion, *The Art of Teaching Children* is the new educator's bible for teachers, parents, and all who work with kids and care about their learning and success.

Better Questioning for Better Learning Benjamin Johnson, 2021-08-10. Learn how to ask deeper questions and develop better questioning habits with this important resource. Author Benjamin Stewart Johnson takes you step by step through the key considerations and brain-based research to keep in mind when developing questions. He begins with an overview of why it's important to understand participants' thought process when being asked questions. He then shows how to set expectations for virtual questions and face-to-face questions, how to plan authentic higher-order questions, how to scaffold and differentiate questions, and how to avoid zombie questions. In addition, he debunks myths such as wait time and points out the best ways to help learners support their answers, use questions to check for understanding, and more. Each section concludes by helping you create an action plan to improve your skills in a given area. Appropriate for teachers, instructional coaches, training facilitators, and specialists, the book can be used independently or in schoolwide book studies to help educators of all subjects and grades improve the depth and quality of their questioning. *Curriculum Applications In Microbiology: Bioinformatics In The Classroom* Mel Crystal Melendrez, Brad W. Goodner, Christopher Kvaal, C. Titus Brown, Sophie Shaw, 2021-09-08. *Teaching and Computers*, 1988. *Inventive Minds* Marvin Minsky, 2025-05-27. Six essays by artificial intelligence pioneer Marvin Minsky on how education can foster inventiveness, paired with commentary by Minsky's former colleagues and students. Marvin Minsky was a pioneering researcher in artificial intelligence whose work led to both theoretical and practical advances. His work was motivated not only by technological advancement but also by the desire to understand the workings of our own minds. Minsky's insights about the mind provide fresh perspectives on education and how children learn. This book collects for the first time six essays by Minsky on children learning and the potential of computers in school to enrich children's development. In these essays, Minsky discusses the shortcomings of conventional education, particularly in mathematics, and considers alternative approaches. He reflects on the role of mentors, describes higher-level strategies for thinking across domains, and suggests projects for children to pursue. Each essay is paired with commentary by one of Minsky's former colleagues or students, which identifies Minsky's key ideas and connects his writings to current research. Minsky once observed that in traditional teaching, instead of promoting inventiveness, we

focus on preventing mistakes These essays offer Minsky's unique insights into how education can foster inventiveness
