Teaching Mathematics with Classroom Voting Kelly Slater Cline, Holly Zullo, 2012 Are you looking for new ways to engage your students Classroom voting can be a powerful way to enliven your classroom by requiring all students to consider a question discuss it with their peers and vote on the answer during class When used in the right way students engage more deeply with the material and have fun in the process while you get valuable feedback when you see how they voted But what are the best strategies to integrate voting into your lesson plans How do you teach the full curriculum while including these voting events How do you find the right questions for your students This collection includes papers from faculty at institutions across the country teaching a broad range of

courses with classroom voting including college algebra precalculus calculus statistics linear algebra differential equations and beyond These faculty share their experiences and explain how they have used classroom voting to engage students to provoke discussions and to improve how they teach mathematics This volume should be of interest to anyone who wants to begin using classroom voting as well as people who are already using it but would like to know what others are doing While the authors are primarily college level faculty many of the papers could also be of interest to high school mathematics teachers

Publisher description **Globalizing Minds** Iveta Silova, Daphne P. Hobson, 2014-05-01 Globalization has a profound effect on the mission and goals of education worldwide One of its most visible manifestations is the worldwide endorsement of the idea of education for global citizenship which has been enthusiastically supported by national governments politicians and policy makers across different nations Increasingly the educational institutions feel under pressure to respond to globalization forces by preparing students to engage competitively and successfully with this new realm lest their nations be left in the dust What is the role of international schools in implementing the idea of education for global citizenship How do these schools create a culturally unbiased global curriculum when the adopted models have been developed by Western societies and at the very least are replete with Western cultural values traditions and biases This collection of essays attempts to grapple with these complex issues while highlighting that culture and politics closely intertwine with schooling and curriculum as parents administrators teachers and students of different backgrounds and interests negotiate definitions of self and each other to construct knowledge in particular contexts The goal is to examine the complexity of factors that drive the global demand for education for global citizenship and deconstruct the contested nature of global citizenship by examining how the phenomenon is understood interpreted and modified in different cultural settings The authors provide not only a thick description of their cases but also a critical assessment of various attempts to initiate and implement educational reforms aimed at the development of globally minded citizens in various national settings

A Decade of the Berkeley Math Circle Zvezdelina Stankova, Tom Rike, 2015-02-03 Many mathematicians have been drawn to mathematics through their experience with math circles The Berkeley Math Circle BMC started in 1998 as one of the very first math circles in the U S Over the last decade and a half 100 instructors university professors business tycoons high

school teachers and more have shared their passion for mathematics by delivering over 800 BMC sessions on the UC Berkeley campus every week during the school year This second volume of the book series is based on a dozen of these sessions encompassing a variety of enticing and stimulating mathematical topics some new and some continuing from Volume I from dismantling Rubik's Cube and randomly putting it back together to solving it with the power of group theory from raising knot eating machines and letting Alexander the Great cut the Gordian Knot to breaking through knot theory via the Jones polynomial from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of Dirichlet Mbius and Euler from leading an army of jumping fleas in an old problem from the International Mathematical Olympiads to improving our own essay writing strategies from searching for optimal paths on a hot summer day to questioning whether Archimedes was on his way to discovering trigonometry 2000 years ago Do some of these scenarios sound bizarre having never before been associated with mathematics Mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader Whether at a beginner an intermediate or an advanced level anyone can find a place here to be provoked to think deeply and to be inspired to create In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI
