Lesson Study Research and Practice in Mathematics Education Lynn C. Hart,Alice S. Alston,Aki Murata,2011-01-11 Lesson study is a professional development process that teachers engage in to systematically examine their practice with the goal of becoming more effective Originating in Japan lesson study has gained significant momentum in the mathematics education community in recent years As a process for professional development lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards benchmarks and nationally validated curricula While the body of knowledge about lesson study is growing it remains somewhat elusive and composed of discrete research endeavors As a new research area there is no coherent knowledge base yet This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work This book describes several aspects of Lesson Study amongst others it gives an historical overview of the concept it addresses issues related to learning and teaching mathematics it looks at the role of the teacher in the process The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching

Different Ways Children Learn to Add and Subtract Thomas A. Romberg,Kevin Francis Collis,1987 This monograph summarises the findings from five related

studies carried out in Sandy Bay Tasmania in 1979 80 The overall purpose of the studies was to examine whether children in Years 1 3 who differed in cognitive capacity learned to add and subtract in different ways The first study was a cross sectional survey designed to determine the memory capacity of a population of children The second study was designed to portray performance differences on a variety of mathematically related developmental tasks for the same population of children Data from these two studies were used to form groups of children who different in cognitive capacity Six groups were formed via cluster analysis with memory capacity being the primary distinguishing characteristic The third fourth and fifth studies each used a sample of students from the six cluster groups across grades The third study examined both the performance and the strategies these children used to solve a structured set of addition and subtraction word problems The fourth study involved repeated assessment of the children s performance on items measuring objectives related to addition and subtraction In the last study these children and their teachers were observed during classroom instruction in mathematics to see how addition and subtraction were taught and whether or not instruction was related to the children s cognitive capacity The results show that children s differences in capacity were reflected in their performance on both verbal and standard problems and in the strategies they used to solve problems
