

DIFFUSION

HIGH

LOW

Diffusion will continue until the concentrations are even and the molecules are evenly spread.

Diffusion is caused by the constant random movement of molecules or particles from areas of HIGH concentration to LOW concentration.

The tea (sugar) is highly concentrated in the bag and moves into the water where there was originally no tea (LOW concentration).

OSMOSIS

Osmosis is diffusion of water across a semi permeable membrane (lets some molecules through).

Water moves across the semi permeable membrane into the grummy bacon.

CELL MEMBRANE

Every cell has a cell membrane which holds the cell together and controls what goes into or out of the cell. It is semi permeable, also called selectively permeable which means it lets some things in and not others. Molecules move across a cell membrane by diffusion.
