**Evolving Software Processes** Arif Ali Khan,Dac-Nhuong Le,2022-02-23 EVOLVING SOFTWARE PROCESSES The book provides basic building blocks of evolution in software processes such as DevOps scaling agile process in GSD in order to lay a solid foundation for successful and sustainable future processes One might argue that there are already many books that include descriptions of software processes The answer is yes but Becoming acquainted with existing software processes is not enough It is tremendously important to understand the evolution and advancement in software processes so that developers appropriately address the problems applications and environments to which they are applied Providing basic knowledge for these important tasks is the main goal of this book Industry is in search of software process management capabilities The emergence of the COVID 19 pandemic emphasizes the industry s need for software specific process management capabilities Most of today s products and services are based to a significant degree on software and are the results of largescale development programs The success of such programs heavily depends on process management

capabilities because they typically require the coordination of hundreds or thousands of developers across different disciplines. Additionally, software and system development are usually distributed across geographical, cultural, and temporal boundaries, which make the process management activities more challenging in the current pandemic situation. This book presents an extremely comprehensive overview of the evolution in software processes and provides a platform for practitioners, researchers, and students to discuss the studies used for managing aspects of the software process, including managerial, organizational, economic, and technical. It provides an opportunity to present empirical evidence as well as proposes new techniques, tools, frameworks, and approaches to maximize the significance of software process management.

**Audience:** The book will be used by practitioners, researchers, software engineers, and those in software process management, DevOps, agile, and global software development.
