Fractals for the Classroom: Strategic Activities Volume Two Heinz-Otto Peitgen, Hartmut Jürgens, Dietmar Saupe, Evan Maletsky, Terry Perciante, Lee Yunker, 2013-06-29 The same factors that motivated the writing of our first volume of strategic activities on fractals continued to encourage the assembly of additional activities for this second volume Fractals provide a setting wherein students can enjoy hands on experiences that involve important mathematical content connected to a wide range of physical and social phenomena The striking graphic images unexpected geometric properties and fascinating numerical processes offer unparalleled opportunity for enthusiastic student inquiry Students sense the vigor present in the growing and highly integrative discipline of fractal geometry as they are introduced to mathematical developments that have occurred during the last half of the twentieth century Few branches of mathematics and computer science offer such a contemporary portrayal of the wonderment available in careful analysis in the amazing dialogue between numeric and geometric processes and in the energetic interaction between mathematics and other disciplines Fractals continue to supply an uncommon setting for animated teaching and learning activities that focus upon fundamental mathematical concepts connections problem solving techniques and many other major topics of elementary and advanced mathematics It remains our hope that through this second volume of strategic activities readers will find their enjoyment of mathematics heightened and their appreciation for the dynamics of the world increased We want experiences with fractals to enliven curiosity and to stretch the imagination

From Systems to

Actor-Networks Andréa Belliger, David Krieger, 2024-02-09 This book documents a paradigm shift not only in the sciences but also in society Everywhere in society systems are becoming networks This implies not only a new understanding of social science but also of society and ourselves The book describes the systems model based on Luhmann's theory of social systems and compares this to Latour's actor network theory It argues that present day society cannot be successfully modeled as a system and illustrates the transformation to a global network society by citing many examples from business education and healthcare The authors argue that actor network theory provides a more comprehensive account of these changes than systems theory Based on actor network theory they propose a theory of the digital transformation that is ushering in the global network society Although people in all areas talk about systems adaptive behavior evolution complexity and networks few know where these concepts come from and what they mean in the theories they belong to This book is for all who are concerned with clarifying the often taken for granted assumptions and concepts that are implicitly or explicitly derived from systems theory and network theory It offers an introduction to the work of Luhmann and Latour and a critical and constructive development of these important theories for the 21st century

Literacy, Place, and Pedagogies of Possibility Barbara Comber, 2015-07-30 How can teachers ensure a pedagogy of possibility underpinned by social justice and what has literacy got to do with this This book explores the positive synergies between critical literacy and place conscious pedagogy Through rich classroom research it introduces and demonstrates how a synthesis of insights from theories of space and place and literacy studies can underpin the design and enactment of culturally inclusive curriculum for diverse student communities and illustrates how making place and space the objects of study provide productive resources for teachers to design enabling pedagogical practices that extend students' literate repertoires The argument is that systematic study of and engagement with specific elements of place can enable students' academic learning and literacy Literacy Place and Pedagogies of Possibility is informed by critical literacy place conscious pedagogy and spatial theory is richly illustrated with examples from classroom research including teacher and student artifacts provides new directions for classroom practice in critical literacy This novel combination of multidisciplinary theory and classroom research extends previous work in critical literacy pedagogy drawing on two decades of ethnographic and collaborative inquiry in classrooms situated in culturally and linguistically diverse classrooms
