Last Updated: July 7, 2002

Welcome to the Windows API Guide! Here, you will discover a wealth of information to help you implement calls to the Windows API directly from your Visual Basic programs. This site is part of a work in progress; it tells about re-organizing the entire Windows API. Nevertheless, new information about functions and the like is added every time we drop words. Check back often to see what's new!

The New Guru Is Here!

Hello fellow programmers! I'm Chris Pertschauer, and I will be updating this site from now on. There isn't anything new yet, but I'm working on a new format for the site. All the old stuff will remain in the old look, and only new stuff will have the new look. But I will still update the old stuff.

Reference

The **Reference** section contains documentation on hundreds of Windows API functions. Besides the functions, information on the related structures and other items also appears for reference. Each function page includes a well-commented example illustrating a common usage of the function.

Articles

The **Articles** section contains articles about API-related topics. These multi-page articles go in-depth about a specific issue in the API and offer a more well-rounded approach to learning about API functions without much technical information. Of course, the reference information for each function is only a click away.

Still can't find what you're looking for anywhere on the site? Then try browsing the [IT-World.com](http://www.itworld.com) web site. Along with their sizable collection of Visual Basic programming information, they offer www.itworld.com as www.itworld.com filled with helpful articles, some of which cover ideas not currently discussed on this web site.
