Stouder,Peter A. Bisson,Robert J. Naiman,2012-02-02 The symposium Pacific Salmon and Their Ecosystems Status and Future Options and this book resulted from initial efforts in 1992 by Robert J Naiman and Deanna J Stouder to examine the problem of declining Pacific salmon *Oncorhynchus* spp Our primary goal was to determine informational gaps As we explored different scientific sources state provincial and federal agencies as well as non profit and fishing organizations we found that the information existed but was not being communicated across institutional and organizational boundaries At this juncture we decided to create a steering committee and plan a symposium to bring together researchers managers and resource users The steering committee consisted of members from state and federal agencies non profit organizations and private industry see Acknowledgments for names and affiliations In February 1993 we met at the University of Washington in Seattle to begin planning the symposium The steering committee spent the next four months developing the conceptual framework for the symposium and the subsequent book Our objectives were to accomplish the following 1 assess changes in anadromous Pacific Northwest salmonid populations 2 examine factors responsible for those changes and 3 identify options available to society to restore Pacific salmon in the Northwest The symposium on Pacific Salmon was held in Seattle Washington January 10 12 1994 Four hundred and thirty five people listened to oral presentations and examined more than forty posters over two and a half days We made a deliberate attempt to draw in speakers and attendees from outside the Pacific Northwest *Annual Report - State of Washington, Department of Fisheries* Washington (State). Department of Fisheries,1968 *Federal Register* ,2013 *A Review of Protocols for Monitoring Streams and Juvenile Fish in Forested Regions of the Pacific Northwest* Scott A. Stolnack,2005 This document reviews existing and proposed protocols used to monitor stream ecosystem conditions and responses to land management activities in the Pacific Northwest Because of recent work aimed at improving the utility of habitat survey and fish abundance assessment methods this review focuses on current since 1993 monitoring

efforts that assess stream habitat conditions and juvenile fish use. It does not focus on protocols specifically intended to monitor trends in fish populations for salmon recovery efforts or other fish life history stages e.g. salmonid smolt monitoring or spawner surveys or approaches designed to monitor water quality or sources of pollution. We provide an overview of agency monitoring protocols, adaptive management and types of monitoring and briefly review the core habitat characteristics thought to be most sensitive to forest management practices. Finally, we summarize a selection of protocols in use in the Pacific Northwest in light of those core habitat characteristics.
