This book helps you understand the concept of the metaverse along with the implementation of generative AI in it. You'll not only get to grips with the underlying concepts but also take a closer look at key technologies that power the metaverse enabling you to plan your business road map. The chapters include use cases on social interaction, work, entertainment, art and shopping to help you make better decisions when it comes to metaverse product and service development. You'll also explore the overall societal benefits and dangers related to issues such as privacy encroachment, technology addiction and sluggishness. The concluding chapters discuss the future of AR and VR roles in the metaverse and the metaverse as a whole to enable you to make long term business plans. By the end of this book you'll be able to successfully invest, build and market metaverse products and services that set you apart as a progressive technology leader. What you will learn: Get to grips with the concept of the metaverse, its origin and its present state. Understand how AR and VR strategically fit into the metaverse. Delve into core technologies that power the metaverse. Dig into use cases that enable finer strategic decision making. Understand the benefits and possible dangers of the metaverse. Plan further ahead by understanding the future of the metaverse. Who this book is for: If you are a C-suite technology and business executive, this book is for you. Investors, entrepreneurs and other tech professionals will also find it beneficial. This book does not require any previous understanding of the metaverse or immersive technologies.

Sun Tracking and Solar Renewable Energy Harvesting Gerro Prinsloo, Robert Dobson, 2015-11-02. Free to download eBook on Practical Solar Tracking Design. Solar Tracking, Sun Tracking, Sun Tracker, Solar Tracker, Follow Sun, Sun Position calculation, Azimuth, Elevation, Zenith, Sun following, Sunrise, Sunset, Moon phase, Moonrise, Moonset calculators. In harnessing power from the sun through a solar tracker or solar tracking system, renewable energy system developers require automatic solar tracking software and solar position algorithms. On-axis sun tracking systems such as the altitude/azimuth dual-axis or multi-axis solar tracker systems use a sun tracking algorithm or ray tracing sensors or software to ensure the sun's passage through the sky is traced with high precision. In automated solar tracker applications, right through summer solstice, solar equinox and winter solstice. Eco-Friendly and Environmentally Sustainable Micro Combined Solar Heat and Power (mCHP, mCCHP, mCHCP) with Microgrid Storage and Layered Smartgrid Control towards Supplying Off-Grid Rural Villages in developing BRICS countries such as Africa, India, China and Brazil. Off-grid rural villages and isolated islands/areas require mCHP and trigeneration solar power plants and associated isolated smart microgrid solutions to serve the community energy needs. This article describes the development progress for such a system, also referred to as solar polygeneration. The system includes a sun tracker mechanism wherein a parabolic dish or lenses are guided by a light-sensitive mechanism in a way that the solar receiver is always at right angle to the solar radiation. Solar thermal energy is then either converted into electrical energy through a free piston Stirling or stored in a thermal storage container. The project includes the thermodynamic modeling of the plant in Matlab/Simulink as well as the development of an intelligent control approach that includes smart microgrid distribution and optimization. The book includes

aspects in the simulation and optimization of stand alone hybrid renewable energy systems and co generation in isolated or islanded microgrids It focusses on the stepwise development of a hybrid solar driven micro combined cooling heating and power mCCHP compact trigeneration polygeneration and thermal energy storage TES system with intelligent weather prediction weak ahead scheduling time horizon and look ahead dispatch on integrated smart microgrid distribution principles The solar harvesting and solar thermodynamic system includes an automatic sun tracking platform based on a PLC controlled mechatronic sun tracking system that follows the sun progressing across the sky An intelligent energy management and adaptive learning control optimization approach is proposed for autonomous off grid remote power applications both for thermodynamic optimization and smart micro grid optimization for distributed energy resources DER The correct resolution of this load following multi objective optimization problem is a complex task because of the high number and multi dimensional variables the cross correlation and interdependency between the energy streams as well as the non linearity in the performance of some of the system components Exergy based control approaches for smartgrid topologies are considered in terms of the intelligence behind the safe and reliable operation of a microgrid in an automated system that can manage energy flow in electrical as well as thermal energy systems The standalone micro grid solution would be suitable for a rural village intelligent building district energy system campus power shopping mall centre isolated network eco estate or remote island application setting where self generation and decentralized energy system concepts play a role Discrete digital simulation models for the thermodynamic and active demand side management systems with digital smartgrid control unit to optimize the system energy management is currently under development Parametric simulation models for this trigeneration system polygeneration poligeneration quadgeneration are developed on the Matlab Simulink and TrnSys platforms In terms of model predictive coding strategies the automation controller will perform multi objective cost optimization for energy management on a microgrid level by managing the generation and storage of electrical heat and cooling energies in layers Each layer has its own set of smart microgrid priorities associated with user demand side cycle predictions Mixed Integer Linear Programming and Neural network algorithms are being modeled to perform Multi Objective Control optimization as potential optimization and adaptive learning techniques

Drone Technology in Architecture, Engineering and Construction Daniel Tal,Jon Altschuld,2021-01-08 A start to finish roadmap on incorporating drone technology into your AEC firm workflow Drone Technology in Architecture Engineering and Construction A Strategic Guide to Unmanned Aerial Vehicle Operation and Implementation is the only process driven step by step handbook to implement drone technology in AEC workflows It provides a comprehensive and practical roadmap for architecture engineering and construction firms to incorporate drones into their design and construction processes The book offers extensive information on drone data processing and includes guidance on how to acquire manipulate and use the various data types produced from drone flights The creation of three dimensional data and visualizations are covered in depth Drone Technology reviews how to select and

fly drones based on data needs and initial costs and how to collect and maintain required flight logs licenses and permits Drone Technology uses several real world project examples that demonstrate and explain how drones can be used to collect Full color orthorectified imagery Accurate 3D point cloud and mesh models Topographic contours Digital Elevation Models DEMs The project examples also describe how these datasets can be integrated with 3D models of proposed conditions photos and other project datasets Drone Technology in Architecture Engineering and Construction is an essential guide for a wide variety of professionals from civil engineers to landscape architects It provides information on professional use of drones for those just considering the technology to those already flying drones professionally It is an invaluable guide for anyone working in the design or construction of buildings and landscapes
