

Friction is a force that impedes motion by its resistive nature. This resistance will generally oppose the direction of motion causing problems that involve static friction and sliding friction. Most friction is the result. Friction may be either static and sliding friction. Friction is the result of microscopic interactions.

## I. Calculating Friction

In the following figure, a force  $F$  is applied to a block. This force is applied to the surface  $F_{\perp}$  which is:

Let's say the normal force  $F_{\perp}$  is applied to the block, pushing the block against the surface.

Let's say the surface is frictionless.

Friction:

$$\text{Friction force } F_f = \mu F_{\perp}$$

Coefficient of friction

Friction force (N)

In this equation:

- 1)  $F_f$  is force of friction.
- 2)  $\mu$  is coefficient of friction.
- 3)  $F_{\perp}$  is normal force applied perpendicular to the surface.

Example: A block is pushed along a horizontal surface. The coefficient of friction is 0.2. The normal force is 100 N. What is the friction force?

$$\begin{aligned} F_f &= \mu F_{\perp} \\ F_f &= 0.2(100 \text{ N}) \\ F_f &= 20 \text{ N} \end{aligned}$$

In this example,  $F_f$  is the friction force.

## II. Static Friction

Static friction is the force that opposes the motion of an object. It is the force that prevents an object from moving. It is the force that opposes the motion of an object.

- 1) A block is pushed along a horizontal surface. The coefficient of friction is 0.2. The normal force is 100 N. What is the friction force?

## Skill Sheet 6 2 Friction Answers
