**The Cultural History of Plants** Sir Ghilleen Prance, Mark Nesbitt, 2012-10-12 This valuable reference will be useful for both scholars and general readers. **The Eggplant Genome** Mark A. Chapman, 2019-05-30 The book discusses the importance of eggplant *Solanum melongena* L. as a crop, highlighting the potential for eggplant to serve as a model for understanding several evolutionary and taxonomic questions. It also explores the genomic make up in particular in comparison to other Solanaceous crops and examines the parallels between eggplant and tomato domestication as well as between the most common eggplant species and two related eggplants native to Africa: Ethiopian eggplant *Solanum aethiopicum* L. and African eggplant *Solanum macrocarpon* L. The eggplant genome was first sequenced in 2014 and an improved version was due to be released in 2017. Further investigations have revealed the relationships between wild species, domesticated eggplant and feral weedy eggplant derived from the domesticate as well as targets of selection during domestication. Parallels between eggplant and tomato domestication loci are well known and the molecular basis is currently being investigated. Eggplant is a source of nutrition for millions of people worldwide, especially in Southeast Asia where it is a staple food source. Domesticated in the old world in contrast to its congeners tomato and potato, the eggplant is morphologically and nutritionally diverse. The spread of wild eggplants from Africa is particularly interesting from a cultural point of view. This book brings together diverse fields of research from bioinformatics to taxonomy to nutrition to allow readers to fully understand eggplant's importance and potential.      Biology and ecology of weeds W. Holzner, M. Numata, 2013-03-14 Weeds are a fascinating study for specialists not only because of their economic importance but also since in this case biology must be combined with history and agriculture and its economic aspects. Thus weed scientists may be concerned with pure basic research concentrating on general aspects or with applied science i.e. having a practical orientation. One of the aims of this book is to create a synthesis

between these two branches of study and to review the literature of both fields The agrestals the weeds of arable land the most important group from an economic point of view was chosen as the main topic Other weed groups could only be mentioned briefly e g grassland weeds or superficially e g aquatic weeds or had to be omitted completely e g ruderals because they are so heterogeneous to keep this volume to an acceptable size and price Nevertheless nearly all subsections of botanical science have been treated **Black Nightshades** Jennifer M.
