- A. 1N and 2N
- B. 1N and 14N
- C. 5N and 6N
- D. 6N and 7N

Addⁿ of Vectors
Addⁿ of two force

$$\vec{A} + \vec{B} = \sqrt{|\vec{A}|^2 + |\vec{B}|^2 + 2|\vec{A}||\vec{B}|\cos\theta}$$

$$F_1 = |F_1| + |F_2|$$

$$F_{min} = |F_1 - F_2|$$

$$F_{res} = \sqrt{|F_1|^2 + |F_2|^2 + 2|F_1||F_2|\cos\theta}$$

Challenges And Goals For Accelerators In The XXI Century Oliver Bruning, Stephen Myers, 2016-02-26

The past 100 years of accelerator based research have led the field from first insights into the structure of atoms to the development and confirmation of the Standard Model of physics Accelerators have been a key tool in developing our

understanding of the elementary particles and the forces that govern their interactions This book describes the past 100 years of accelerator development with a special focus on the technological advancements in the field the connection of the various accelerator projects to key developments and discoveries in the Standard Model how accelerator technologies open the door to other applications in medicine and industry and finally presents an outlook of future accelerator projects for the coming decades

The World's Future Crisis: Extractive Resources Depletion Shahla Seifi, 2021-10-01 This book focuses mainly on strategic decision making at a global level which is rarely considered in approaches to sustainability This book makes a unique contribution as the work looks at global consequences of mineral exhaustion and steps that can be taken to alleviate the impending problems This book highlights how sustainability has become one of the most important issues for businesses governments and society at large This book explores the topic of sustainability as one that is under much debate as to what it actually is and how it can be achieved but it is completely evident that the resources of the planet are fixed in quantity and once used cannot be reused except through being reused in one form or another This is particularly true of the mineral resources of the planet These are finite in quantity and once fully extracted extra quantities are no longer available for future use This book argues and presents evidence that the remaining mineral resources are diminishing significantly and heading towards exhaustion Once mined and consumed they are no longer available for future use other than what can be recycled and reused This book demonstrates that future scarcity means that best use must be made of what exists as sustainability depends upon this and best use is defined as utility rather than economic value which must be considered at a global level rather than a national level Moreover sustainability depends upon both availability in the present and in the future so the use of resources requires attention to the future as well as to the present This book investigates the alternative methods of achieving the global distribution of these mineral resources and proposes an optimum solution This book adds to the discourse through the understanding of the importance of the depletion and finiteness of raw materials and their use for the present and the future in order to achieve and maintain sustainability
