Physics Memo Trial 2014:

The History of Physics in Cuba Angelo Baracca, Jürgen Renn, Helge Wendt, 2014-04-22 This book brings together a broad spectrum of authors both from inside and from outside Cuba who describe the development of Cuba's scientific system from the colonial period to the present. It is a unique documentation of the self-organizing power of a local scientific community engaged in scientific research on an international level. The first part includes several contributions that reconstruct the different stages of the history of physics in Cuba from its beginnings in the late colonial era to the present. The second part comprises testimonies of Cuban physicists who offer lively insights from the perspective of the actors themselves. The third part presents a series of testimonies by foreign physicists, some of whom were directly involved in developing Cuban physics in particular in the development of teaching and research activities in the early years of the Escuela de Física. The fourth part of the volume deals with some of the issues surrounding the publishing of scientific research in Cuba. Cuba's recent history and current situation are very controversial issues. Little is known about the development and status of higher education and scientific research on the island. However, Cuba has one of the highest proportions in the world of people with a university degree or doctorate and is known for its highly developed medical system. This book focuses on a comprehensive overview of the history of the development of one specific scientific discipline, physics, in Cuba. It traces the evolution of an advanced research system in a developing country and shows a striking capacity to link the development of modern research with the concrete needs of the country and its population. A little-known aspect is the active participation of several western physicists and technicians during the 1960s, the role of summer schools organized by French, Italian, and other western physicists, as well as the active collaboration with European universities. Nuclear Science Abstracts, 1973 Lung Cancer Screening Gregory C. Kane, Julie A. Barta, Ronald E. Myers, Nathaniel R. Evans III, 2023-08-24 This book is a comprehensive guide to lung cancer screening for clinicians, healthcare systems, community leaders, and public health officials, with the hope of creating a more equitable landscape in both lung cancer screening and lung cancer-related outcomes at local, state, and national levels. Authors take a new approach to primary and secondary lung cancer prevention that is in the early stages of adoption in the United States. The last decade ushered in recognition of screening as an effective intervention, but unfortunately, despite the wide acceptance of the importance of this new screening modality, nationally, not more than 5% of eligible subjects have undergone screening to date in the United States, although in some states, uptake has reached as high as 16%. As is common with any new preventive cancer screening, racial and socioeconomic disparities emerge in utilization, stage at diagnosis, and mortality. Over time, these disparities decline, but consequential differences endure. Therefore, it is critical to establish equitable screening practices. The true measure of the effectiveness of any lung cancer screening program needs to be viewed through the lens of its impact on populations including those most affected by the morbidity and mortality of smoking-related illness and lung cancer. As such, this book emphasizes a number of important public health topics.

including community outreach to vulnerable populations social justice issues addressing stigma and fatalism in the general community and the use of geocoding to assess a program s impact at a population level This book weaves traditional topics related to lung cancer screening such as promoting initial and repeat screening interpreting Lung RADs and managing the follow up of findings into the population perspective in order to present a unified comprehensive approach to the subject Further it serves as a guide that health systems health care professionals community leaders and other stakeholders can use to achieve the promise of lung cancer screening

Tattar, 2025-05-20

An analysis of advances in military technology that illustrates the importance of organizational flexibility in both an attacker's innovations and an opponent's adaptations How important is military innovation in determining outcomes during armed conflict In Innovation and Adaptation in War Matthew Tattar questions the conventional wisdom that to succeed military organizations must innovate early and often Because successful methods of warfare are soon widely imitated or countered on the international stage the advantages of a particular innovation quickly evaporate Therefore Tattar argues large scale innovations at the cost of organizational flexibility and the ability to adapt to an adversary's innovations may not be the optimal path not just because force readiness is vital but also because innovation does not provide as long lasting and decisive an advantage as may have been previously thought Although other scholars have analyzed the sources of military innovation Tattar is the first to focus on the relationship between innovation and specific military outcomes Looking at several different types of military organizations and many different types of battles he draws on theoretical works in depth historical research and case studies and finds that the initial advantages that are generated by innovation disappear far too rapidly in wartime for militaries to depend on them for victory Furthermore as Tattar demonstrates emphasizing innovation in defense planning at the expense of organizational flexibility can have significant negative consequences The decisive factor in successful adaptation more often than not is a well positioned and flexible organization Providing both a new framework for studying military innovation and a comprehensive review of the current literature in this field Innovation and Adaptation in War offers crucial policymaking insights into when and under what circumstances militaries should innovate and adapt **Scientific and Technical Aerospace Reports**, 1991 United States Army in World War 2, Special Studies,

Manhattan District the first steps in acquiring the means to produce atomic weapons and the appointment of General Groves Subsequent topical chapters trace the building and operation of the large scale process plants for the production of fissionable materials the administration of a broad range of support activities such as security and community management and the fabrication testing and combat employment of atomic bombs A concluding section describes how the Army dealt with the difficult problems arising during its unexpectedly prolonged postwar trusteeship of the project until December 1946 when the newly created civilian agency the United States Atomic Energy Commission assumed responsibility for atomic energy matters
