### Matter, Form and Function

*Big Idea: For a structure to be sustainable, it must withstand different forces.*

PH.1.01 - Students will be able to make measurements precisely and accurately using a variety of measurement tools. (Week 01 - Week 02)

#### Concepts:

- A. Physics as experimental science

Physics is divided in to two entities: experimental Physics and theoretical Physics.

A theoretical physicist uses mathematics to write proofs for the 'thought experiments' he/she thinks of. Sometimes completely new types of mathematics are invented to prove the theories. In order to quantify General Relativity, Einstein had to use a type of mathematical space called Riemann space and the mathematics associated with Riemann space.

An experimental physicist also has hypotheses and theories, but they devise actual experiments to show these hypotheses are true (or not).

General Relativity is one example where it is shown true by both mathematics and by experiments. The latest experiment to show General Relativity is true is the satellite "Gravity Probe B", which orbited the earth (still is) for a couple of years gathering data on what's called "frame dragging" -- which is a prediction from General Relativity math that had not been shown by experiment (until now).

Large particle accelerators, like CERN in Europe, allow experimental physicists to do experiments on high-energy particles, sub-atomic particles, and sub-sub atomic particles.

#### • B. Systems of measurements and standards

**The English system of measurement** grew out of the creative way that people measured for themselves. Familiar objects and parts of the body were used as measuring devices. For example, people measured shorter distances on the ground with their feet.

They measured longer distances by their paces (a "mile" was a thousand paces). They measured capacities with common household items such as cups, pails, and baskets. The word *gallon* comes from an old name for a pail. Unfortunately, these creative measuring devices allowed different measurements to be obtained when different people measured the same items. Eventually, a standard was set so that all measurements represented the same amount for everyone

**Clifford Algebras and their Applications in Mathematical Physics** Rafał Ablamowicz, 2000 The first part of a two volume set concerning the field of Clifford geometric algebra this work consists of thematically organized chapters that provide a broad overview of cutting edge topics in mathematical physics and the physical applications of Clifford algebras algebras and their applications in physics Algebraic geometry cohomology non commutative spaces  $q$  deformations and the related quantum groups and projective geometry provide the basis for algebraic topics covered Physical applications and extensions of physical theories such as the theory of quaternionic spin a projective theory of hadron transformation laws and electron scattering are also presented showing the broad applicability of Clifford geometric algebras in solving physical problems Treatment of the structure theory of quantum Clifford algebras the connection to logic group representations and computational techniques including symbolic calculations and theorem proving rounds out the presentation *Secondary Education in Ethiopia* Rajendra Joshi, Adriaan Verspoor, 2012-11-01 This book discusses reforms that should be undertaken in secondary education to support Ethiopia's transition from a low to middle income economy The most critical reform identified is the introduction of a flexible curriculum that serves the needs of all students including those who may not pursue higher education *Clifford Algebras and their Applications in Mathematical Physics* Rafał Ablamowicz, Bertfried Fauser, 2012-12-06 The plausible relativistic physical variables describing a spinning charged and massive particle are besides the charge itself its Minkowski four position  $X$  its relativistic linear four momentum  $P$  and also its so called Lorentz four angular momentum  $E_0$  the latter forming four translation invariant part of its total angular four momentum  $M$  Expressing these variables in terms of Poincare covariant real valued functions defined on an extended relativistic phase space  $2\pi$  means that the mutual Poisson bracket relations among the total angular momentum functions  $M_{ab}$  and the linear momentum functions  $p_a$  have to represent the commutation relations of the Poincare algebra On any such an extended relativistic phase space as shown by Zakrzewski  $2\pi$  the natural Poisson bracket relations  $1\pi$  imply that for the splitting of the total angular momentum into its orbital and its spin part  $1\pi$  one necessarily obtains  $1\pi$  On the other hand it is always possible to shift translate the commuting see  $1\pi$  four position  $x_a$  by a four vector  $X_a$   $1\pi$  so that the total angular four momentum splits instead into a new orbital and a new Pauli-Lubanski spin part  $1\pi$  in such a way that  $1\pi$  However as proved by Zakrzewski  $2\pi$  the so defined new shifted four position functions  $X$  must fulfill the following Poisson bracket relations  $1\pi$

Cemal Eringen, 2012-12-02 Continuum Physics Volume IV Polar and Nonlocal Field Theories discusses the exposition of field theories for bodies which possess inner structure that can interact with mechanical and electromagnetic fields This book provides precise presentations of exact continuum theories on materially non uniform or non simple bodies that can respond to short and long range inter particle loads and fields This volume consists of three parts Part I is devoted to the study of

continuum field theories for bodies having inner structure All materials to some extent are composed of particles that behave like small rigid bodies or deformable particles unlike the geometrical points of the classical continuum theory The developments of nonlocal theories of nonpolar and polar continua are covered in Parts II and III This publication is valuable to students and researchers interested in polar and nonlocal field theories **Progress of Theoretical Physics** ,1948
