### FORCES & NEWTON'S 1ST/2ND LAWS

#### STUDY GUIDE

#### NEWTON'S 1ST & 2ND LAWS

##### Forces

- A **force** is a push or a pull that acts on an object and is caused by something else. For example, if you push on a box then you are applying a force on the box. The force is acting on the box and the force is caused by you.
- Multiple forces can be acting on an object at the same time.
- Forces are **vector** quantities which means they have a magnitude (a strength or value) and a direction. Forces are often described using vector arrows which have a length (representing the magnitude) and a direction. The force vector arrow typically starts on the object that the force is acting on and points in the direction of the push or pull.
- Forces are not visible, but you can often see the effect of a force, like the motion (or lack of motion) of an object.
- The forces acting on an object are related to the object's motion (or lack of motion) as described by Newton's laws of motion. However, a force exists on its own regardless of how an object is moving.
- The SI unit of force is a **Newton (N)** which is derived from other SI units:  $\text{N} = \text{kg} \cdot \text{m/s}^2$ . 1 Newton (1 N) is equal to approximately 0.22 pounds of force (lbf).

A person pushes a box to the right.

• A force is acting on the box.

• The force is caused by the person.

• The force vector can be drawn in different places.
